TMP302 使いやすい低消費電力、低電源電圧、マイクロパッケージの温度スイッチ

1 特長

- 低消費電力：15µA（最大値）
- SOT563パッケージ: 1.6mm×1.6mm×0.6mm
- トリップ・ポイント精度：+40°C～+125°Cで±0.2°C（標準値）
- トリップ・ポイントをピンで選択可能
- オープン・ドレイン出力
- ヒステリシスをピンで選択可能：5°Cおよび10°C
- 低い電源電圧範囲: 1.4V～3.6V

2 アプリケーション

- 携帯電話用ハンドセット
- 携帯用メディア·プレーヤー
- 消費者向け電子機器
- サーバー
- 電源システム
- DC-DCモジュール
- 温度監視
- 電子保護システム

3 概要

TMP302デバイスは、マイクロパッケージ(SOT563)の温度スイッチです。TMP302は消費電力が低く（最大値15µA）、トリップ・ポイントとヒステリシスをピンで選択可能な、使いやすい製品です。

これらのデバイスは、動作のため追加部品を必要としません。マイクロプロセッサやマイクロコントローラとは独立に動作できます。

TMP302は、いくつかの異なるバージョンで供給されます。他のトリップ・ポイントについては、TI代理店にお問い合わせください。

製品情報(1)

型番	パッケージ	選択可能なトリップ・ポイント(°C)(2)
TMP302A	SOT (6)	50、55、60、65
TMP302B	SOT (6)	70、75、80、85
TMP302C	SOT (6)	90、95、100、105
TMP302D	SOT (6)	110、115、120、125

(1) 利用可能なすべてのパッケージについては、このデータシートの末尾にある注文情報を参照してください。

(2) 使用可能な他のトリップ・ポイントについては、TI代理店にお問い合わせください。

Pin Functions

PIN		TYPE	DESCRIPTION
NO.	NAME		
1	TRIPSET0	Digital Input	Used in combination with TRIPSET1 to select the temperature at which the device trips
2	GND	Ground	Ground
3	$\overline{OUT}$	Digital Output	Open drain, active-low output
4	HYSTSET	Digital Input	Used to set amount of thermal hysteresis
5	V_S	Power Supply	Power supply
6	TRIPSET1	Digital Input	Used in combination with TRIPSET0 to select the temperature at which the device trips

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
Voltage	Supply		4	V
	Input pin (TRIPSET0, TRIPSET1, HYSTSET)	–0.5	V_S + 0.3 and ≤ 4	
	Output pin ($\overline{OUT}$)	–0.5	4	
Current	Output pin ($\overline{OUT}$)		10	mA
Temperature	Operating	–55	130	°C
	Junction		150	
	Storage	–60	150	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1000	
		Machine model (MM)	±500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_S	Power supply voltage	1.4	3.3	3.6	V
R_{pullup}	Pullup resistor connected from $\overline{OUT}$ to V_S	10		100	kΩ
T_A	Specified temperature	–40		125	°C

6.4 Thermal Information

THERMAL METRIC(1)		TMP302 DRL (SOT) 6 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	210.3	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	105.0	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	87.5	°C/W
ψ_{JT}	Junction-to-top characterization parameter	6.1	°C/W
ψ_{JB}	Junction-to-board characterization parameter	87.0	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report (SPRA953).

6.5 Electrical Characteristics

At T_A = –40°C to +125°C, and V_S = 1.4 to 3.6 V (unless otherwise noted). 100% of all units are production tested at T_A = 25°C; overtemperature specifications are specified by design.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
TEMPERATURE MEASUREMENT						
	Trip point accuracy			±0.2	±2	°C
	Trip point accuracy versus supply			±0.2	±0.5	°C/V
	Trip point hysteresis	HYSTSET = GND		5		°C
		HYSTSET = V_S		10		°C
TEMPERATURE TRIP POINT SET						
	Temperature trip point set	TRIPSET1 = GND, TRIPSET0 = GND		Default		°C
		TRIPSET1 = GND, TRIPSET0 = V_S		Default + 5		°C
		TRIPSET1 = V_S, TRIPSET0 = GND		Default + 10		°C
		TRIPSET1 = V_S, TRIPSET0 = V_S		Default + 15		°C
HYSTERESIS SET INPUT						
V_{IH}	Input logic level high		0.7 × V_S		V_S	V
V_{IL}	Input logic level low		–0.5		0.3 × V_S	V
I_I	Input current	0 < V_I < 3.6 V			1	µA
DIGITAL OUTPUT						
V_{OL}	Output logic level low	V_S > 2 V, I_{OL} = 3 mA	0		0.4	V
		V_S < 2 V, I_{OL} = 3 mA	0		0.2 × V_S	V
POWER SUPPLY						
	Operating Supply Range		1.4		3.6	V
I_Q	Quiescent Current	T_A = –40°C to +125°C		8	15	µA
		V_S = 3.3 V, T_A = 50°C		7		µA

6.6 Typical Characteristics

At T_A = 25°C and V_S = 3.3 V, unless otherwise noted.

7 Detailed Description

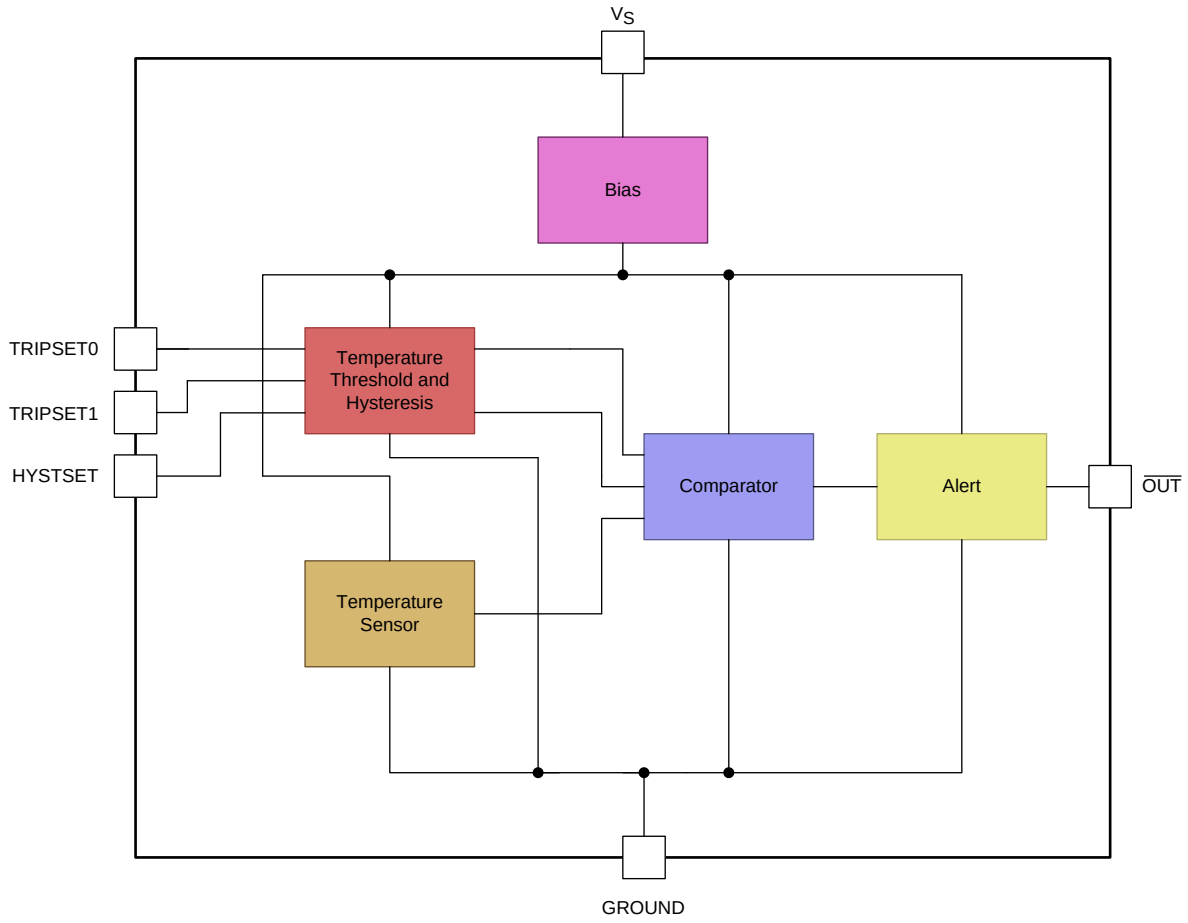
7.1 Overview

The TMP302 temperature switch is optimal for ultra low-power applications that require accurate trip thresholds. A temperature switch is a device that issues an alert response when a temperature threshold is reached or exceeded. The trip thresholds are programmable to four different settings using the TRIPSET1 and TRIPSET0 pins. Table 1 lists the pin settings versus trip points.

Table 1. Trip Point versus TRIPSET1 and TRIPSET0

TRIPSET1	TRIPSET0	TMP302A	TMP302B	TMP302C	TMP302D
GND	GND	50°C	70°C	90°C	110°C
GND	V_S	55°C	75°C	95°C	115°C
V_S	GND	60°C	80°C	100°C	120°C
V_S	V_S	65°C	85°C	105°C	125°C

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 HYSTSET

If the temperature trip threshold is crossed, the open-drain, active low output ($\overline{OUT}$) goes low and does not return to the original high state (that is, V_S) until the temperature returns to a value within a hysteresis window set by the HYSTSET pin. The HYSTSET pin allows the user to choose between a 5°C and a 10°C hysteresis window. Table 2 lists the hysteresis window that corresponds to the HYSTSET setting.

Table 2. HYSTSET Window

HYSTSET	THRESHOLD HYSTERESIS
GND	5°C
V_S	10°C

For the specific case of the device, if the HYSTSET pin is set to 10°C (that is, connected to V_S) and the device is configured with a 60°C trip point (TRIPSET1 = V_S, TRIPSET0 = GND), when this threshold is exceeded the output does not return to the original high state until it reaches 50°C. This case is more clearly shown in Figure 9.

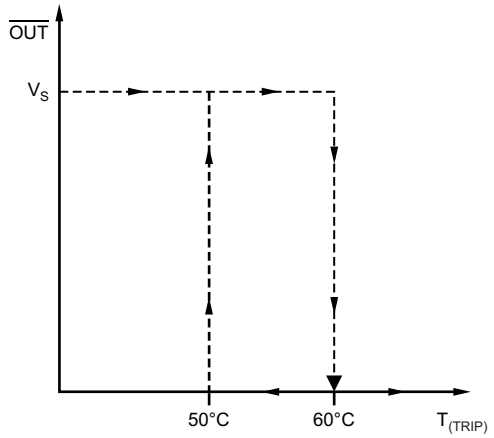


Figure 9. TMP302A: HYSTSET = V_S, TRIPSET1 = V_S, TRIPSET0 = GND

7.4 Device Functional Modes

The TMP302 family of devices has a single functional mode. Normal operation for the TMP302 family of devices occurs when the power-supply voltage applied between the V_S pin and GND is within the specified operating range of 1.4 to 3.6 V. The temperature threshold is selected by connecting the TRIPSET0 and TRIPSET1 pins to either the GND or V_S pins (see Table 1). Hysteresis is selected by connecting the HYSTSET pin to either the GND or V_S pins (see Table 2). The output pin, $\overline{OUT}$, remains high when the temperature is below the selected temperature threshold. The $\overline{OUT}$ pin remains low when the temperature is at or above the selected temperature threshold. The $\overline{OUT}$ pin returns from a low state back to the high state based upon the amount of selected hysteresis (see the *HYSTSET* section).

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Configuring the TMP302

The TMP302 family of devices is simple to configure. The only external components that the device requires are a bypass capacitor and pullup resistor. Power-supply bypassing is strongly recommended. Use a 0.1-µF capacitor placed as close as possible to the supply pin. To minimize the internal power dissipation of the TMP302 family of devices, use a pullup resistor value greater than 10 kΩ from the $\overline{OUT}$ pin to the V_S pin. Refer to Table 1 for trip-point temperature configuration. The TRIPSET pins can be toggled dynamically; however, the voltage of these pins must not exceed V_S. To ensure a proper logic high, the voltage must not drop below 0.7 V × V_S.

8.2 Typical Application

Figure 10 shows the typical circuit configuration for the TMP302 family of devices. The TMP302 family of devices is configured for the default temperature threshold by connecting the TRIPSET0 and TRIPSET1 pins directly to ground. Connecting the HY$\overline{STSE}$T pin to ground configures the device for 5°C of hysteresis. Place a 10-kΩ pullup resistor between the $\overline{OUT}$ and V_S pins. Place a 0.1-µF bypass capacitor between the V_S pin and ground, close to the TMP302 device.

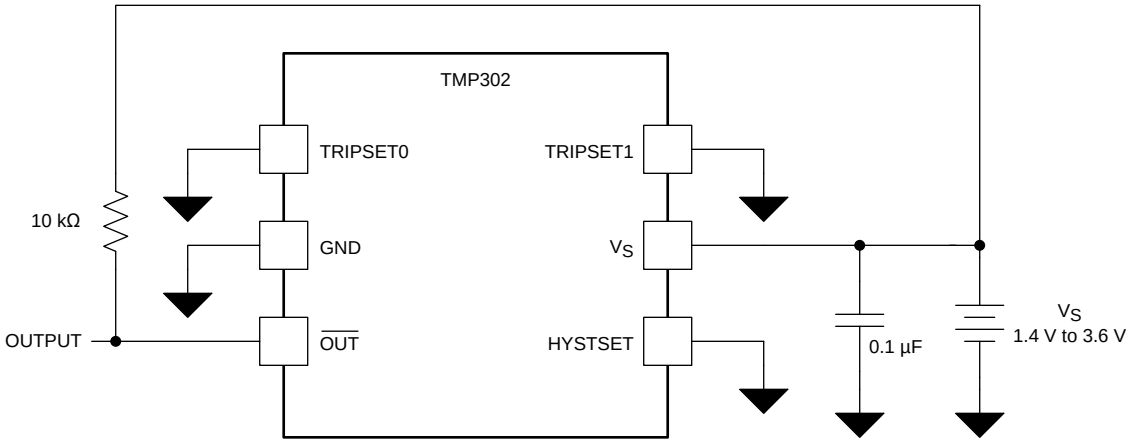

Figure 10. TMP302 Typical Application Schematic

Figure 11 shows the most generic implementation of the TMP302 family of devices. Switches are shown connecting the TMPSET0, TMPSET1 and HYSTSET pins to either V_S or ground. The use of switches is not strictly required; the switches are shown only to illustrate the various pin connection combinations. In practice, connecting the TMPSET0, TMPSET1 and HYSTSET pins to ground or directly to the V_S pin is sufficient and minimizes space and cost. If additional flexibility is desired, connections from the TMPSET0, TMPSET1 and HYSTSET pins can be made through 0-Ω resistors which can be either populated or not populated depending upon the desired connection.

Typical Application (continued)

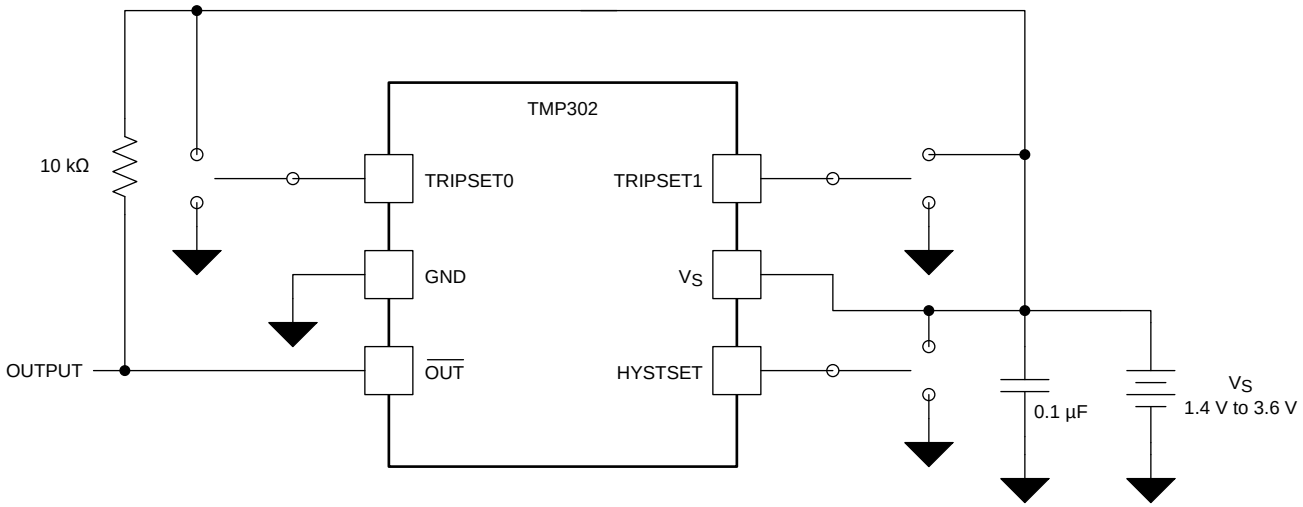

Figure 11. TMP302 Generic Application Schematic

8.2.1 Design Requirements

Designing with the TMP302 family of devices is simple. The TMP302 family of devices is a temperature switch commonly used to signal a microprocessor in the event of an over temperature condition. The temperature at which the TMP302 family of devices issues an active low alert is determined by the configuration of the TRIPSET0 and TRIPSET1 pins. These two pins are digital inputs and must be tied either high or low, according to Table 1. The TMP302 family of devices issues an active low alert when the temperature threshold is exceeded. The device has built-in hysteresis to avoid the device from signaling the microprocessor as soon as the temperature drops below the temperature threshold. The amount of hysteresis is determined by the HYSTSET pin. This pin is a digital input and must be tied either high or low, according to Table 2.

See Figure 10 and Figure 11 for typical circuit configurations.

8.2.2 Detailed Design Procedure

Determine the threshold temperature and hysteresis required for the application. Connect the TMPSET0, TMPSET1, and HYSTSET pins according to the design requirements. Refer to Table 1 and Table 2. Use a 10-kΩ pullup resistor from the $\overline{OUT}$ pin to the V_S pin. To minimize power, a larger-value pullup resistor can be used but must not exceed 100 kΩ. Place a 0.1-µF bypass capacitor close to the TMP302 device to reduce noise coupled from the power supply.

8.2.3 Application Curves

Figure 12 and Figure 13 show the TMP302A power-on response with the ambient temperature less than 50°C and greater than 50°C respectively. The TMP302A was configured with trip point set to 50°C. The TMP302B, TMP302C, and TMP302D devices behave similarly with regards to power on response with T_A below or above the trip point. Note that the $\overline{OUT}$ signal typically requires 35 ms following power on to become valid.

Typical Application (continued)

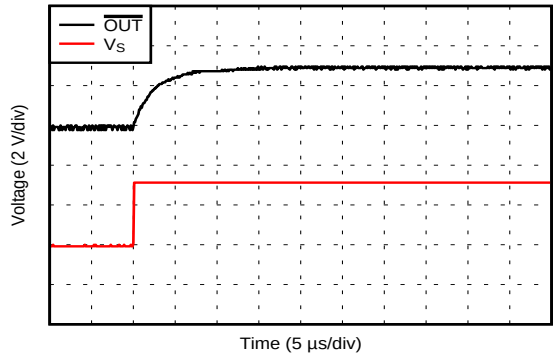

Figure 12. TMP302A Power-On Response, T_A Less than 50°C

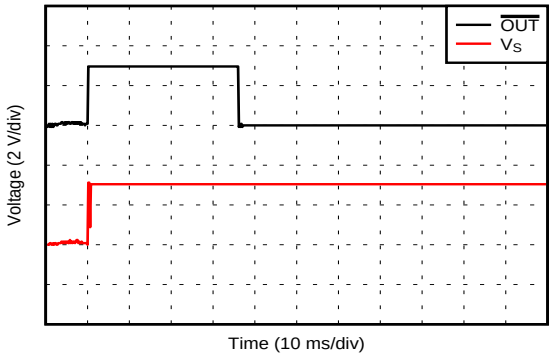

Figure 13. TMP302A Power-On Response, T_A Greater than 50°C

9 Power Supply Recommendations

The TMP302 family of devices is designed to operate from a single power supply within the range 1.4 V and 3.6 V. No specific power supply sequencing with respect to any of the input or output pins is required. The TMP302 family of devices is fully functional within 35 ms of the voltage at the V_S pin reaching or exceeding 1.4 V.

10 Layout

10.1 Layout Guidelines

Place the power supply bypass capacitor as close as possible to the V_S and GND pins. The recommended value for this bypass capacitor is 0.1-µF. Additional bypass capacitance can be added to compensate for noisy or high-impedance power supplies. Place a 10-kΩ pullup resistor from the open drain $\overline{OUT}$ pin to the power supply pin V_S.

10.2 Layout Example

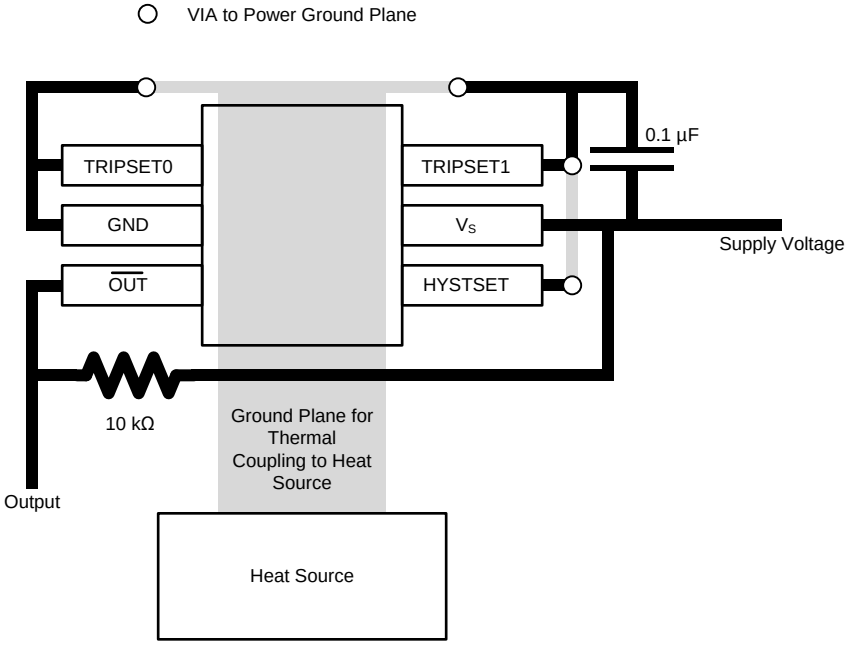

Figure 14. Layout Example

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

テキサス・インスツルメンツは、技術データと信頼性データ (データシートを含みます)、設計リソース (リファレンス デザインを含みます)、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の黙示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または黙示的にかかわらず拒否します。

これらのリソースは、 テキサス・インスツルメンツ製品を使用する設計の経験を積んだ開発者への提供を意図したものです。(1) お客様のアプリケーションに適した テキサス・インスツルメンツ製品の選定、(2) お客様のアプリケーションの設計、検証、試験、(3) お客様のアプリケーションに該当する各種規格や、その他のあらゆる安全性、セキュリティ、規制、または他の要件への確実な適合に関する責任を、お客様のみが単独で負うものとします。

上記の各種リソースは、予告なく変更される可能性があります。これらのリソースは、リソースで説明されている テキサス・インスツルメンツ製品を使用するアプリケーションの開発の目的でのみ、 テキサス・インスツルメンツはその使用をお客様に許諾します。これらのリソースに関して、他の目的で複製することや掲載することは禁止されています。 テキサス・インスツルメンツや第三者の知的財産権のライセンスが付与されている訳ではありません。お客様は、これらのリソースを自身で使用した結果発生するあらゆる申し立て、損害、費用、損失、責任について、 テキサス・インスツルメンツおよびその代理人を完全に補償するものとし、 テキサス・インスツルメンツは一切の責任を拒否します。

テキサス・インスツルメンツの製品は、 テキサス・インスツルメンツの販売条件、または ti.com やかかる テキサス・インスツルメンツ製品の関連資料などのいずれかを通じて提供する適用可能な条項の下で提供されています。 テキサス・インスツルメンツがこれらのリソースを提供することは、適用される テキサス・インスツルメンツの保証または他の保証の放棄の拡大や変更を意味するものではありません。

お客様がいかなる追加条項または代替条項を提案した場合でも、 テキサス・インスツルメンツはそれらに異議を唱え、拒否します。
