

TMP320C40KGDC, SMJ320C40KGDC, TMP320C40KGDCT, SMJ320C40KGDCT FLOATING-POINT DIGITAL SIGNAL PROCESSOR KNOWN GOOD DIES

SGUS024C – MARCH 1997 – REVISED OCTOBER 2001

- SMJ: QML Processing to MIL-PRF-38535
- TMP: Commercial Level Processing
- Operating Temperature Ranges:
 - Military (M) -55°C to 125°C
 - Commercial (C) -25°C to 85°C
 - Commercial (L) 0°C to 70°C
- Highest Performance Floating-Point Digital Signal Processor (DSP)
 - 'C40-50:
 - 40-ns Instruction Cycle Time:
 - 50 MFLOPS, 25 MIPS, 275 MOPS,
 - 320 MBps
 - 'C40-40:
 - 50-ns Instruction Cycle Time:
 - 40 MFLOPS, 20 MIPS, 220 MOPS,
 - 256 MBps
- Six Communications Ports
- 6-Channel Direct Memory Access (DMA) Coprocessor
- Single-Cycle Conversion to and From IEEE-745 Floating-Point Format
- Single Cycle $1/x$, $1/\sqrt{x}$
- Source-Code Compatible With SMJ320C30
- Validated Ada Compiler
- Single-Cycle 40-Bit Floating-Point, 32-Bit Integer Multipliers
- 12 40-Bit Registers, 8 Auxiliary Registers, 14 Control Registers, and 2 Timers
- IEEE Standard 1149.1† Test-Access Port (JTAG)
- Two Identical External Data and Address Buses Supporting Shared Memory Systems and High Data-Rate, Single-Cycle Transfers:
 - High Port-Data Rate of 100 MBytes/s (Each Bus)
 - 16G-Byte Continuous Program/Data/Peripheral Address Space
 - Memory-Access Request for Fast, Intelligent Bus Arbitration
 - Separate Address-, Data-, and Control-Enable Pins
 - Four Sets of Memory-Control Signals Support Different Speed Memories in Hardware
- Fabricated Using Enhanced Performance Implanted CMOS (EPIC™) Technology by Texas Instruments (TI™)
- Separate Internal Program, Data, and DMA Coprocessor Buses for Support of Massive Concurrent Input/Output (I/O) of Program and Data Throughput, Maximizing Sustained Central Processing Unit (CPU) Performance
- On-Chip Program Cache and Dual-Access/Single-Cycle RAM for Increased Memory-Access Performance
 - 512-Byte Instruction Cache
 - 8K Bytes of Single-Cycle Dual-Access Program or Data RAM
 - ROM-Based Bootloader Supports Program Bootup Using 8-, 16-, or 32-Bit Memories Over Any One of the Communications Ports

description

The TMP/SMJ320C40KGD DSP is a 32-bit, floating-point processor manufactured in 0.72- μ m, double-level metal CMOS technology. It is the fourth generation of DSPs from Texas Instruments, and it is the world's first DSP designed for parallel processing. The on-chip parallel processing capabilities of the 'C40 make the floating-point performance required by many applications achievable and cost-effective.

The TMP/SMJ320C40 is the first DSP with on-chip communication ports for processor-to-processor communication using simple communication software with no external hardware. This allows connectivity with no external glue logic. The communication ports remove I/O bottlenecks, and the independent smart-DMA coprocessor is able to handle the CPU I/O requirements.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

† IEEE Standard 1149.1-1990 Standard Test-Access Port and Boundary-Scan Architecture

FLOATING-POINT DIGITAL SIGNAL PROCESSOR

KNOWN GOOD DIES

SGUS024C – MARCH 1997 – REVISED OCTOBER 2001

description (continued)

The features of the communication ports are:

- Six communication ports for direct interprocessor communication and processor I/O
- 20 MBps bidirectional interface on each communication port for high-speed and low-cost multiprocessor interface
- Separate input and output first-in, first-out (FIFO) buffers for I/O and processor-to-processor communication
- Automatic arbitration and handshaking for direct processor-to-processor connection

The DMA coprocessor allows concurrent I/O and CPU processing for superior sustained CPU performance.

The key features of the DMA coprocessor:

- Link pointers that allow DMA channels to auto-initialize
- Parallel CPU operation and DMA transfers
- Six DMA channels support communication-port-to-memory data transfers

The TMP/SMJ320C40KGD CPU is configured for high-speed internal parallel processing. The key features of the CPU are:

- Eight operations/cycles
 - 40-/32-bit floating-point/integer multiply
 - 40-/32-bit floating-point/integer arithmetic and logic unit (ALU) operation
 - Two data accesses
 - Two address-register updates
- IEEE floating-point conversion
- Division and square-root support
- 'C30 assembly language compatibility
- Byte and halfword accessibility

Key factors in a parallel-processing implementation are the development tools that are available. The 'C40 is supported by a host of parallel-processing development tools for developing and simulating code and for debugging parallel-processing systems. The code generation tools include:

- Optimizing ANSI C compiler with a runtime library that supports use of communication ports and DMA
- SPOX™, by Spectron Microsystems Incorporated, which provides parallel processing support as well as DMA and communication port drivers
- Assembler and linker with support for mapping program and data to parallel processors.

SGUS024C – MARCH 1997 – REVISED OCTOBER 2001

description (continued)

The simulation tools include:

- Parallel DSP system-level simulation, by Logic Modeling Corporation (LMC), which includes a hardware verification (HV) model and a full functional (FF) model
- TI software simulator with high-level language debugger interface for simulating a single processor

The hardware development and verification tools include:

- Parallel processor in-circuit emulator and high-level language debugger: XDS510™
- Parallel processor development system with four TMS320C40s, local and global memory, and communication port connections

For additional information when designing for cold temperature operation, please see Texas Instruments application report *320C3x, 320C4x and 320MCM42x Power-up Sensitivity at Cold Temperature*, literature number SGUA001.

known good die technology

Known good die (KGD) options are offered for use in multichip modules and chip-on-board (COB) applications. There are currently two verification technologies used at TI to support KGD requirements for the TMP/SMJ320C40KGD: Removable Tab (R-Tab), and Temporary Wire Bond (TWB).

The availability of selected DSP products in a tape-automated bond (TAB) configuration has made possible the use of a removable TAB technique. The TAB leadframe is attached to a gold-bumped die using modified bonding parameters. This technique allows easy removal of the tape after all needed 100% screens and parametric tests have been performed. The tape is removed from the tested part and the die is shipped in a conventional die container. The gold bumps remain on the bond pads, which allow for subsequent attachment of gold-ball bonds.

Similarly, with KGD using the TWB technique, bond wires are attached to the bond pads using adjusted bonding parameters which allow for easy removal of the die after all needed 100% screens and parametric tests have been performed. The die is removed from the temporary package and the die is shipped in a conventional die container.

visual inspection of known good die (KGD) using temporary wire bond (TWB) process

QML KGD devices produced using the TWB technology do not optically meet MIL-STD-883E (Method 2010, paragraph 3.1.1.1.h) metal bond pad visual inspection criterion due to the bond pad marks formed during bonding removal process. However, these devices have been reliably bonded using normal wire bond processes, and pass bond strength evaluations.

electrical specifications

For military electrical and timing specifications, please refer to the *SMJ320C40 Digital Signal Processor* data sheet, literature number SGUS017. For commercial electrical and timing specifications, see the *TMS320C40 Digital Signal Processor Data Sheet*, literature number SPRS038.

KNOWN GOOD DIES

SGUS024C – MARCH 1997 – REVISED OCTOBER 2001

Figure 1. TMP/SMJ320C40KGD Device Nomenclature

JEDEC STANDARD

- Die thickness is approximately 15 mils \pm 1 mil.
- Backside surface finish is silicon.
- Maximum allowable die junction operating temperature is 175°C.
- Glassivation material is compressive nitride.
- Bond pad metal is composed of copper-doped aluminum.
- Percent defective allowed for burned-in die is 5.
- Life test data is available.
- Configuration control notification.
- Group A attribute summary is available (SMJ only).
- Suggested die-attach material is silver glass (QMI 2569F).
- Suggested bond wire size is 1.25 mil.
- For gold bumped KGD die, suggested bonding method is gold-ball bonding.
- ESD rating is Class II.
- Maximum allowable peak process temperature for die-attach is 440°C \pm 5°C (for QMS2569F)
- Saw kerf is dependent on blade size used.
- Die backside potential is left floating.

KNOWN GOOD DIES**

SGUS024C – MARCH 1997 – REVISED OCTOBER 2001

'320C40 (rev 5.2) known good die pad information

**Figure 2. '320C40 Die Numbering Format
(See Table 1)**

Table 1 provides a reference for the following:

- The 'C40 signal identities in relation to the pad numbers
- The 'C40 X,Y coordinates, where bond pad 82 serves as the origin (0,0)

In addition, the following notes are significant:

- A. X,Y coordinate data is in microns.
- B. The active silicon dimensions are $12424.86 \mu\text{m} \times 12035.52 \mu\text{m}$ (489.16 mils \times 473.83 mils).
- C. The die size is approximately $12598.40 \mu\text{m} \times 12192.00 \mu\text{m}$ (496.00 mils \times 480.00 mils).
- D. Bond pad dimensions are $108.00 \mu\text{m} \times 108.00 \mu\text{m}$ (4.25 mils \times 4.25 mils).
- E. Center of bond pad to edge of die min (without scribe) = $107.80 \mu\text{m}$ (4.24 mils).
- F. For R-Tab devices, gold bump dimensions are approximately $92 \mu\text{m} \times 92 \mu\text{m}$ (3.62 mils \times 3.62 mils).
- G. Coordinate origin is at (0,0) (center of bond pad 82).

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale (<https://www.ti.com/legal/termsofsale.html>) or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
