About This Manual

The DEM-PCM1780/81/82 EVM is a complete evaluation platform for the PCM1780/PCM1781/PCM1782 series of 24-bit, 192-kHz stereo audio digital-to-analog converters (DACs). This user's guide provides the information needed to set up and operate the DEM-PCM1780/81/82 EVM, a test platform for the eight-channel, 24-bit [PCM1780](#), [PCM1781](#), and [PCM1782](#) audio DACs. For a more detailed description of the PCM1780/81/82 product line, refer to the product data sheet available from the Texas Instruments web site at <http://www.ti.com>. Support documents are listed in the section of this guide entitled **Related Documentation from Texas Instruments**.

How to Use This Manual

Throughout this document, the abbreviation *EVM* and the term *evaluation module* are synonymous with the DEM-PCM1780/81/82 EVM.

[Chapter 1](#) discusses the block diagram and primary features of the DEM-PCM1780/81/82 EVM. This chapter also provides general information regarding the default switch and jumper configurations.

[Chapter 2](#) explains how to use the software provided with the DEM-PCM1780/81/82 EVM.

[Chapter 3](#) includes the EVM electrical schematics, printed circuit board (PCB) layout, and the bills of material.

Information About Cautions and Warnings

This document contains caution statements.

CAUTION

This is an example of a caution statement. A caution statement describes a situation that could potentially damage your software or equipment.

The information in a caution or a warning is provided for your protection. Please read each caution and warning carefully.

Related Documentation From Texas Instruments

The following document provides information regarding Texas Instruments integrated circuits used in the assembly of the DEM-PCM1780/81/82 EVM. These documents are available from the [TI web site](#). The last character of the literature number corresponds to the document revision that is current at the time of the writing of this document. Newer revisions may be available from the TI web site at <http://www.ti.com/> or call the Texas Instruments Literature Response Center at (800) 477-8924 or the Product Information Center at (972) 644-5580. When ordering, identify the document(s) by both title and literature number.

Data Sheet	Literature Number
PCM1780/PCM1781/PCM1782 Product data sheet	SLES132B

If You Need Assistance

If you have questions regarding either the use of this evaluation module or the information contained in the accompanying documentation, please contact the Texas Instruments Product Information Center at (972) 644-5580 or visit the TI web site at www.ti.com.

FCC Warning

This equipment is intended for use in a laboratory test environment only. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to subpart J of part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense is required to take whatever measures may be required to correct this interference.

Trademarks

All trademarks are the property of their respective owners.

Description

The DEM-PCM1780/81/82 EVM is an evaluation board for the [PCM1780/PCM1781/PCM1782](#), a 24-bit, 192-kHz, enhanced multi-level, Delta-Sigma ($\Delta\Sigma$) audio DAC. This EVM provides all necessary connectors and circuitry for interfacing to audio test systems and commercial audio equipment.

1.1 Functional Block Diagram

Figure 1-1 illustrates the functional block diagram of the DEM-PCM1780/81/82 EVM.

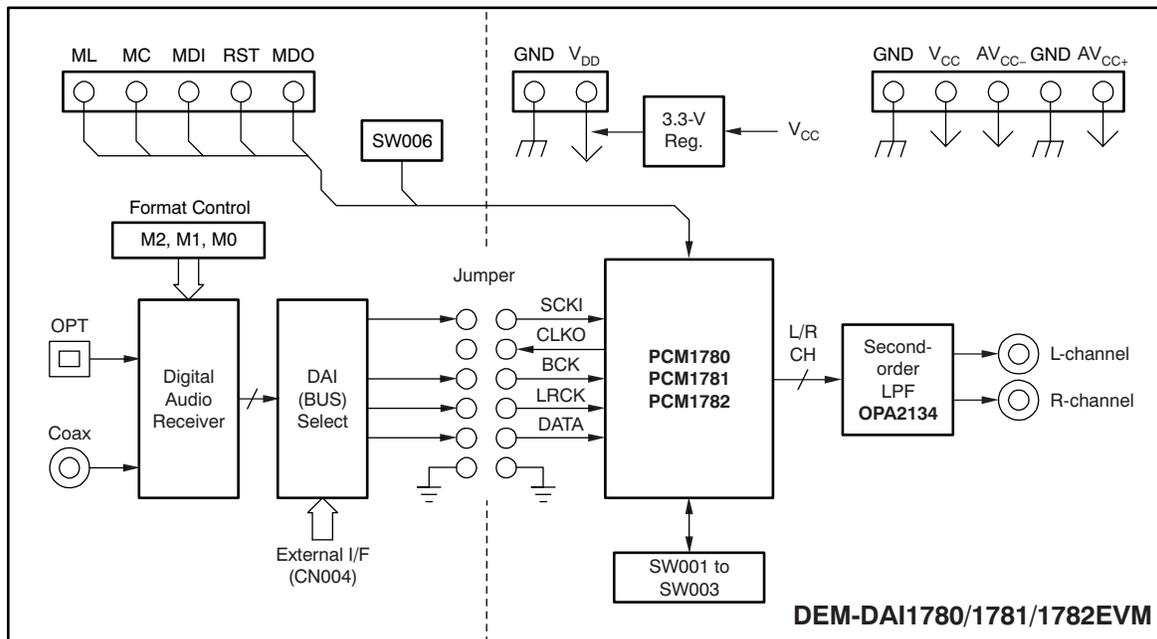

Figure 1-1. DEM-PCM1780/81/82 EVM Functional Block Diagram

1.2 EVM Features

The DEM-PCM1780/81/82 EVM offers the following features:

- Complete evaluation platform for the PCM1780/81/82 stereo audio DAC
- Onboard low-pass filters for the left and right channels
- Easy configuration using onboard switches and jumpers
- 96-kHz digital audio receiver accepts S/PDIF inputs
- Centronics connector for interfacing to a PC parallel port (required for the demonstration software)
- Power-supply requirements: +5 V, +15 V, and -15 V
- CD-ROM containing demonstration software for programming the PCM1780/81/82 internal registers (requires a PC running Microsoft® Windows® 3.1, 95, 98, 2000, or XP operating system), a copy of this user's guide, and a [PCM1780/81/82 product data sheet](#)

If any of these items are missing or damaged, please contact your local Texas Instruments representative.

1.3 Hardware Description

1.3.1 Power Supplies

The DEM-PCM1780/81/82 evaluation fixture requires three power supplies for operating the PCM1780/81/82, the digital support circuitry, and the low-pass filter operational amplifier (op amp). Standard banana jacks are provided for all power-supply connections.

Connector CN054 provides the 5-V supply required for V_{CC} . It is used to power the PCM1780/81/82 as well as the digital audio receiver (U002) and associated logic (U003 and U004).

Connectors CN051 (AV_{CC+}) and CN (AV_{CC-}) are used to power the [OPA2134](#) dual operational amplifier (U101) that performs the DAC output low-pass filter function. AV_{CC+} can be set from 5 V to 18 V, while AV_{CC-} can be set from -5 V to -18 V.

Ground connections are made at connectors CN052 and CN055. Both are connected to the ground plane of the DEM-PCM1780/81/82 board.

1.3.2 Analog Output

The left and right audio outputs are available at RCA jacks CN104 and CN105, respectively. The outputs are taken from the low-pass filter, which has a gain of 2. The low-pass filter can be configured for one of two cutoff frequencies: 54 kHz or 108 kHz. Typically, the 54-kHz cutoff frequency is used for all measurements.

- For $f_{-3\text{ dB}} = 54$ kHz, jumpers JP101 through JP106 must all be installed.
- For $f_{-3\text{ dB}} = 108$ kHz, jumpers JP101 through JP106 must all be removed.

1.3.3 Digital Audio Interface

A digital audio receiver (U002) is provided for easy connection to S/PDIF and optical signal sources, including audio test systems (Audio Precision and Rhode and Schwarz, for example) and commercial audio equipment (CD and DVD players). The receiver can operate at rates up to 96 kHz with 24-bit audio data.

Switches SW001 through SW003 are used to set the receiver output data format, as shown in [Table 1-1](#). [Table 1-2](#) shows the jumper configuration for JP001 for normal operation.

Table 1-1. Digital Audio Receiver Configuration

SW001	SW002	SW003	Receiver Output Data Format
L	L	L	16-bit to 24-bit, left-justified format
L	H	L	16-bit to 24-bit, I ² S™ format
H	L	H	16-bit, right-justified (or standard)
L	H	H	18-bit, right-justified (or standard)

Table 1-2. JP001 Jumper Configuration⁽¹⁾

JP001 Jumper	16-bit, Right-Justified Format	16-bit to 24-bit, I ² S Format	16-bit to 24-bit, Left-Justified Format
CLKO	X	X	X
SCLK	O	O	O
GND	O	O	O
BCK	O	O	N/C
BCK (left-justified)	N/C	N/C	N/C
LRCK	O	O	O
DATA	O	O	O

⁽¹⁾ O = Install jumper, N/C = Remove jumper, X = Do not care

Switch SW004 is a momentary-contact pushbutton switch that is normally open. It is used to reset the digital audio receiver when necessary.

The demonstration board also supports direct interfacing to audio decoders and signal processors via connector CN004 (unpopulated). SCLK, BCK, LRCK, and DATA are available and buffered by U005. In addition, +5 V (V_{CC}) and ground are available at CN004. Switch SW005 is used to select between the digital audio receiver and connector CN004 as the source of the audio interface. [Table 1-3](#) shows the available switch settings.

Table 1-3. Digital Audio Source Selection

SW005 Setting	Source Selection
INT	Digital audio receiver (U002)
EXT	Connector CN004 via buffer U005

1.3.4 DIP-Switch Configuration

Switch SW006 is not used for the PCM1780/81/82. It is included for future products that may be compatible with this demonstration board. All switch elements must be set to the OFF position for the PCM1780/81/82.

1.3.5 Connector to PC Parallel Port/Host

The evaluation fixture includes a Centronics connector, CN003, that is used to connect to a PC parallel port or an alternative host controller. This connector is used to access the serial control port of the PCM1780/1782. The serial control port is used to program the PCM1780/1782 internal registers. A standard printer cable is used to connect CN003 of the evaluation fixture to a PC parallel port. The port signals are buffered using U006.

1.3.6 Operation Controls for PCM1781

SW001 on the daughtercard is the operating control for the PCM1781.

- **SW001:** Data format select
 - R/J-16 = 16-bit, Right-justified format
 - I²S = 16- to 24-bit, I²S format

SW006 on the DAI/DAC motherboard is also used as the operating control for the PCM1781. [Table 1-4](#) summarizes the options for SW006.

Table 1-4. ML, MC/SW006 Options

MC	ML	De-Emphasis
LOW	LOW	OFF
LOW	HIGH	ON $f_s = 48$ kHz
HIGH	LOW	ON $f_s = 44.1$ kHz
HIGH	HIGH	ON $f_s = 32$ kHz

MD/SW006 control options:

- MUTE CONTROL
- LOW MUTE OFF
- HIGH MUTE ON

1.4 Electrostatic Discharge Warning

Many of the components on the DEM-PCM1780/81/82 EVM are susceptible to damage by electrostatic discharge (ESD). Customers are advised to observe proper ESD handling precautions when unpacking and handling the EVM, including the use of a grounded wrist strap at an approved ESD workstation.

CAUTION

Failure to observe ESD handling procedures may result in damage to EVM components.

Demonstration Software

Software is provided with the EVM board to allow programming of the PCM1780 internal registers. The software operates on computers equipped running Microsoft Windows 3.1, 95, 98, 2000 or XP operating systems. The demo software requires that the PC printer port be connected to CN-2 of the DEM-DAI/DAC using a standard printer cable.

Topic	Page
2.1 Installation	14
2.2 Using the Demo Software.....	14
2.3 Hold and Pass	14

2.1 Installation

The demo software is available for download from the [PCM1780 product folder](#) (*Tools & Software* link, [slac239.zip](#)) on the TI web site as a compressed file.

To install the software on your computer, first create a new folder on your hard drive with an appropriate name (for example, DEM1780_82, PCM1780, etc.). Then open the *Demxxxx* folder in the installation download file, and copy all of the files in it to the new folder that you created on your hard disk.

Open the configuration setting file named *DEMxxxx.ini* with a text editor, such as Notepad or WordPad. When the file is opened, find the following line:

```
PCMIFADR = &h378
```

The **&h378** indicates the printer port address that the demo software will use to communicate with the DEM-DAI1780/82. This address must be set to *&h378*, *&h278*, or *&h3BC*. Most PCs use *&H378* as the default printer port address. If your printer port is not located at *&h378*, edit the address to match your computer port address.

2.2 Using the Demo Software

Double-click on the application file named *demxxxx.exe*. A startup window will appear on your screen, with two menus near the top of the window, named **Execute** and **Window**.

The Execute menu includes three selections: Initialize, Reset, and Exit. Selecting *Initialize* instructs the program to write all of the PCMDAC internal registers with the default values. Selecting *Reset* instructs the program to rewrite the PCMDAC internal registers with the data currently selected in the application windows. Selecting *Exit* closes the application.

The Window menu includes three selections: *Attenuation*, *Operational Control*, and *Function Control*. The following sections provide an explanation of each window.

2.3 Hold and Pass

Each window has a button near the top, labeled either HOLD or PASS. Toggle the setting by clicking on this button. When set to HOLD, the user can change the settings in a window, but the changes will not be written to the register(s) until the OK button (which appears at the bottom left corner of the window) is pressed. When set to PASS, changes made within a window are immediately written to the corresponding register(s).

Schematic, PCB Layout, and Bill of Materials

This chapter provides the electrical and physical layout information for the DEM-DAI/DAC and the DEM-PCM1780/81/82. The bill of materials (BOM) is included for component and manufacturer reference.

Note: Board layouts are not to scale. These are intended to show how the board is laid out; they are not intended to be used for manufacturing DEM-PCM1780/81/82 EVM PCBs.

EVALUATION BOARD/KIT IMPORTANT NOTICE

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive**.

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.**

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit www.ti.com/esh.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

EVM WARNINGS AND RESTRICTIONS

It is important to operate this EVM within the input voltage range of -0.3 V to $+5\text{ V}$ and the output voltage range of -15 V to $+15\text{ V}$.

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than $+55^{\circ}\text{C}$. The EVM is designed to operate properly with certain components above $+55^{\circ}\text{C}$ as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
