IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards. TI does not warrant or represent that its products will perform flawlessly or be totally reliable or error-free. TIs products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as such. TI does not assume any liability for customers use of products outside the scope of its specifications and conditions of sale.

TI’s products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or “enhanced plastic.” Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer’s risk and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use. TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer’s risk and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use. TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.

Design Kit Quick Start Guide

TI E2E Community Home Page e2e.ti.com

Mailing Address: Texas Instruments, Post Office Box 655303, Dallas, Texas 75265 Copyright © 2013, Texas Instruments Incorporated

SPRAW243
Welcome to the TMS320DM36x Reference Design Kit (RDK) Quick Start Guide. The guide is designed to help you through the initial setup of the RDK. This Quick Start Guide will enable you to get the kit running and experiencing the kit in less than 20 minutes. The RDK contains the following:

**Hardware**
- IP camera enclosed with TMS320DM36x ARM® core inside, up to 486MHz
- Auto iris lens
- JTAG debug board

**Printed Document**
- TMS320DM36x RDK Quick Start Guide (this document)

**Miscellaneous**
- Adapter (12V / 1A)
- Ribbon cable
- RS-232 cable
- Audio cable
- U sharp stand
- Camera tripod
- Ethernet cable

---

### Default setup

1. Take off the cap in front of the camera, and turn the lens clockwise into the CS mount on the camera to install the lens.

2. Fasten the U Sharp Stand onto the camera. With a screwdriver, twist the screws into bottom side of the camera.
3. Connect the tripod to the camera by twisting it into the U Sharp Stand which is already on the camera. Change the angle of the legs to achieve balance.

4. Connect the power adapter into the power jack (12V DC) on the back side of the camera and plug into an AC power source. You should see the power light turn green.

5. Make sure your wired link is enabled. For Windows® 7 users, from Start → Control Panel → Network and Sharing Center (or change Network Status and Tasks) → View Adapter Settings (in the navigation bar on the left side), find the Local Area Connection and right click, choose Enable if needed.

6. Right click the Local Area Connection, choose “Properties”. The “Local Area Connections Properties” window will pop up. Double click Internet Protocol Version 4 (TCP/IPv4) Properties to pop up a window as shown to the right. Configure your PC as shown.
Connect the Ethernet cable to the RJ-45 jack on the back side of the camera and connect the other side of the cable to the Ethernet port on your PC. After turning the DIP switch to “3” (static IP), you should see the LAN light turn green.

Open Internet Explorer on your PC and type 192.168.1.168 into the address bar and push the enter button. You will be asked to install two add-ons the first time you go to this address. Click the request bar and click Run in the following pop-up window.

By now, you should be able to see the log-in page of the IP camera. The required information is as follows:

Username: admin
Password: 9999

Click Submit. Now you are very close to the end of the setup and you can explore the capability of the RDK as you want!

You can adjust different dials on the lens to get different images. For example, if you adjust the middle dial, you are actually opening or closing the lens to increase or decrease the light through the lens. Or you can adjust the dial furthest from the camera to change the focus.
IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have not been so designated is solely at the Buyer’s risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
