TPSM82823A PSPICE Transient Model Features and Limitations

```
*********************************************************************************
*
* Model Usage Notes:
* A. Features have been modelled
*    1. FPWM operation
*    2. Low Dropout Operation (100% Duty Cycle)
*    3. Soft Start-up
*    4. Switch Current Limit and Hiccup Short Circuit Protection
*    5. Undervoltage Lockout
*    6. Output Discharge
*    7. Power good output
*
* B. Features have not been modelled
*    1. Leakage current
*    2. Overtemperature protection or Thermal Shutdown
*
* C. Application Notes
*    1. The parameter STEADY_STATE has been used to reach the steady state faster.
*       Keep STEADY_STATE = 0 to observe startup behaviour
*       keep STEADY_STATE = 1 IOUT= load current value and appropriate IC on capacitor to observe
*       for faster Steady state.
*
