

ARM MPU AM335X General Purpose EVM Base Board ZCZ Package

- See the Hardware User Guide for board details
- See the PCB Build Specification for PCB Details
- See the EVM Errata Document for Known Issues

The top diagram shows a circuit for SW2. The switch is connected to a 3.3V supply (labeled 3.3V) and a pull-up resistor of 10kΩ. The other end of the switch is connected to the B3SL pin of the processor. The B3SL pin is also connected to a 1μF capacitor (C117) to ground (DGND). The output of the switch is labeled SYS_WARMRESETn.

The bottom diagram shows a circuit for SW5. The switch is connected to a 3.3V supply (labeled 3.3V) and a pull-up resistor of 10kΩ. The other end of the switch is connected to the B3SL pin of the processor. The B3SL pin is also connected to a 1μF capacitor (C118) to ground (DGND). The output of the switch is labeled PB_INTERRUPT. The output is also connected to a 10kΩ resistor (R113) to ground (DGND). The output is labeled AM335x_EXTINTn.
