Design Notes:
- fsw = 500kHz
- UVLO set to 30V turn on, 28V turn off
- IADJ connected to VIN, so VISENSE = 300mV

VIN 30V .. 40V, nom 36V
VOUT up to 16V @ 1A maximum output current

Parts with designators >100 do not have a footprint on the PCB
Design Notes:
- fsw = 500kHz
- UVLO set to 30V turn on, 28V turn off
- IADJ connected to VIN, so VISENSE = 300mV
- 2010 pad for R6 sufficient
- use R6 = 0.33Ohm for 0.9A, R6 = 0.3Ohm for 1A LED current
- Parts with designators >100 do not have a footprint on the PCB
- VIN 30V .. 40V, nom 36V
- VOUT up to 16V @ 1A maximum output current

Texas Instruments and/or its licensors do not warrant the accuracy or completeness of this specification or any information contained therein.
Texas Instruments and/or its licensors do not warrant that this design will meet the specifications, will be suitable for your application or fit for any particular purpose, or will operate in an implementation. Texas Instruments and/or its licensors do not warrant that the design is production worthy.
You should completely validate and test your design implementation to confirm the system functionality for your application.
