

AM26LS32Ax、AM26LS33Ax クワッド差動ライン・レシーバ

1 特長

- AM26LS32A デバイスは、ANSI TIA/EIA-422-B、TIA/EIA-423-B、ITU 勧告 V.10 および V.11 の要件を満たす、または上回ります
- AM26LS32A デバイスは同相範囲が $\pm 7V$ で、感度が $\pm 200mV$ です
- AM26LS33A デバイスは同相範囲が $\pm 15V$ で、感度が $\pm 500mV$ です
- 入力ヒステリシス: 50mV (標準値)
- 単一の 5V 電源で動作
- 低消費電力ショットキー回路
- 3 ステート出力
- 相補出力のイネーブル入力
- 入力インピーダンス: 12k Ω (最小値)
- オープン入力フェイルセーフ

2 アプリケーション

- 高信頼性車載用アプリケーション
- ファクトリ・オートメーション
- ATM およびキャッシュ・カウンタ
- スマート・グリッド
- AC およびサーボ・モータ・ドライブ

3 概要

AM26LS32Ax および AM26LS33Ax デバイスは、平衡および不平衡のデジタル・データ転送用のクワッド差動ライン・レシーバです。イネーブル機能は 4 つのレシーバすべてに共通で、アクティブ High またはアクティブ Low の入力から選択できます。3 ステート出力により、バス構成システムに直接接続できます。入力がオープン的时候、フェイルセーフ設計により出力が常に High であることが保証されます。

AM26LS32 や AM26LS33 と比較すると、AM26LS32A と AM26LS33A には感度を向上させるため追加の増幅段が組み込まれています。入力インピーダンスが増加し、その結果、バス・ラインの負荷が減少します。段を追加すると伝搬遅延が長くなりますが、ほとんどのアプリケーションでは交換可能性には影響しません。

AM26LS32AC および AM26LS33AC は 0°C ~ 70°C での動作が規定されています。AM26LS32AI は -40°C ~ 85°C での動作が規定されています。AM26LS32AM および AM26LS33AM は防衛用温度範囲 -55°C ~ 125°C での動作が規定されています。

8 Detailed Description

8.1 Overview

The AM26LS32 is a quadruple-differential line receiver that meets the necessary requirements for NSI TIA/EIA-422-B, TIA/EIA-423-B, and ITU Recommendation V.10 and V.11. This device allows a low-power or low-voltage MCU to interface with heavy machinery, subsystems, and other devices through long wires of up to 1000 m, giving any design a reliable and easy-to-use connection. As any RS422 interface, the AM26LS32 works in a differential voltage range, which enables very good signal integrity.

8.2 Functional Block Diagram

8-1. Logic Diagram (Positive Logic)

8.3 Feature Description

The device can be configured using the G and $\overline{G}$ logic inputs to select receiver output. The high voltage or logic 1 on the G pin allows the device to operate on an active-high, and having a low voltage or logic 0 on the G enables active low operation. These are simple ways to configure the logic to match that of the receiving or transmitting controller or microprocessor.

8.4 Device Functional Modes

The receivers implemented in these RS422 devices can be configured using the G and $\overline{G}$ logic pins to be enabled or disabled. This allows users to ignore or filter out transmissions as desired.

9 Application and Implementation

注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくことになります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

9.1 Application Information

When using AM26LS32A as a receiver, the AM26LS31AC can allow multiple AM26LS32As to be used causing an increase in the amount of outputs.

9.2 Typical Application

図 9-1 shows a configuration with no termination. Although reflections are present at the receiver inputs at a data signaling rate of 200 kbps with no termination, the RS-422-compliant receiver reads only the input differential voltage and produces a clean signal at the output.

[†] R_T equals the characteristic impedance of the line.

図 9-1. Application Diagram

9.2.1 Design Requirements

Resistor and capacitor (if used) termination values are shown for each laboratory experiment, but vary from system to system. For example, the termination resistor, R_T , must be within 20% of the characteristic impedance, Z_0 , of the cable and can vary from about 80 Ω to 120 Ω .

9.2.2 Detailed Design Procedure

Add a V_{CC} bypass capacitor (0.1 μF or more). Either enable (G pin) input can turn on the receivers, so connect the desired enable to a compatible logic line output. The other enable input must be tied to the inactive state supply rail. If the receivers must always be active, then connect both enables to the supply rail such that at least one is set to an active-state rail. V_{CC} must be 5 V within 10% and logic inputs must provide TTL-compatible voltage levels A & B Inputs can lead to an external connector or can be left unconnected. The last receiver on a cable requires termination, either on-board or use as an external resistor. Unused Y outputs can be left unconnected.

9.2.3 Application Curve

FIG 9-2. High-Level Output Voltage vs Free-Air Temperature

9.3 Power Supply Recommendations

Place 0.1-μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies.

9.4 Layout

9.4.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
- Connect low-ESR, 0.1-μF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

10.4 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
