

ISO7820x High-Performance, 8000 V_{PK} Reinforced Dual Channel Digital Isolator

1 Features

- Signaling Rate: Up to 100 Mbps
- Wide Supply Range: 2.25 V to 5.5 V
- 2.25 V to 5.5 V Level Translation
- Wide Temperature Range: –55°C to 125°C
- Low Power Consumption, Typical 1.7 mA per Channel at 1 Mbps
- Low Propagation Delay: 11 ns Typical (5 V Supplies)
- Industry leading CMTI(Min): ±100 kV/μs
- Robust Electromagnetic Compatibility (EMC)
- System-Level ESD, EFT, and Surge Immunity
- Low Emissions
- Isolation Barrier Life: > 25 Years
- SOIC-16 Wide Body (DW) and Extra-Wide Body (DWW) Package Options
- Safety and Regulatory Approvals:
 - 8000 V_{PK} Reinforced Isolation per DIN V VDE V 0884-10 (VDE V 0884-10):2006-12
 - 5.7 kV_{RMS} Isolation for 1 minute per UL 1577
 - CSA Component Acceptance Notice 5A, IEC 60950-1 and IEC 60601-1 End Equipment Standards
 - CQC Certification per GB4943.1-2011
 - TUV Certification per EN 61010-1 and EN 60950-1
 - All DW Package Certifications Complete; DWW Package Certifications Complete per UL, TUV and Planned for VDE, CSA, and CQC

2 Applications

- Industrial Automation
- Motor Control
- Power Supplies
- Solar Inverters
- Medical Equipment
- Hybrid Electric Vehicles

3 Description

The ISO7820 is a high-performance, dual-channel digital isolator with 8000 V_{PK} isolation voltage. This device has reinforced isolation certifications according to VDE, CSA, CQC, and TUV. The isolator provides high electromagnetic immunity and low emissions at low power consumption, while isolating CMOS or LVC MOS digital I/O's. Each isolation channel has a logic input and output buffer separated by silicon dioxide (SiO₂) insulation barrier. ISO7820 has two forward channels and no reverse-direction channel. If the input power or signal is lost, default output is 'high' for the ISO7820 and 'low' for the ISO7820F device. Used in conjunction with isolated power supplies, this device prevents noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. Through innovative chip design and layout techniques, electromagnetic compatibility of ISO7820 has been significantly enhanced to ease system-level ESD, EFT, Surge and Emissions compliance. ISO7820 is available in 16-pin SOIC wide-body (DW) and extra-wide body (DWW) packages. The DWW package option comes with enable pins which can be used to put the respective outputs in high impedance for multi-master driving applications and to reduce power consumption.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ISO7820, ISO7820F	SOIC, DW (16)	10.30 mm x 7.50 mm
	Extra wide SOIC, DWW (16)	10.30 mm x 14.0 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

Simplified Schematic

(1) V_{CCI} and GNDI are supply and ground connections respectively for the input channels.

(2) V_{CCO} and GNDO are supply and ground connections respectively for the output channels.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Original (July 2015) to Revision A	Page
• Changed the Safety and Regulatory Approvals list of Features	1
• Changed Features From: 8000 V _{PK} V _{IOTM} and 2121 V _{PK} V _{IORM} Reinforced..To: 8000 V _{PK} Reinforced...	1
• Added Features "TUV Certification per EN 61010-1 and EN 60950-1"	1
• Added package: Extra wide SOIC, DWW (16) to the <i>Device Information</i> table	1
• Changed text in the first paragraph of the Description From: "certifications according to VDE, CSA, and CQC". To: "certifications according to VDE, CSA, CQC, and TUV."	1
• Changed the Simplified Schematic	1
• Added the DWW pinout image	4
• Added the DWW package to the Thermal Information	6
• Changed the Supply Current section of the Electrical Characteristics, 5 V to include the DWW package information	7
• Deleted Note 1 From the Electrical Characteristics, 5 V	7
• Changed the Supply Current section of the Electrical Characteristics, 3.3 V to include the DWW package information	7
• Deleted Note 1 From the Electrical Characteristics, 3.3 V	8
• Changed the Supply Current section of the Electrical Characteristics, 2.5 V to include the DWW package information	8
• Deleted Note 1 From the Electrical Characteristics, 2.5 V	9
• Added "Channel-to-channel output skew time" to Switching Characteristics, 5 V	9
• Added "Channel-to-channel output skew time" to Switching Characteristics, 3.3 V	9
• Added "Channel-to-channel output skew time" to Switching Characteristics, 2.5 V	10
• Added Note: "This coupler..." to the High Voltage Feature Description section	15
• Changed the Table 1 , added DWW package information	15
• Added Note 1 to Table 2	16

Revision History (continued)

• Added "Climatic category" to Table 2 and deleted Note 1	16
• Changed the CSA column in Table 4	17
• Added TUV to the Regulatory Information section and Table 4 . Deleted Note 1 in Table 4	17
• Changed Table 6	19
• Changed Figure 15	20
• Changed the Typical Application text and Figure 16	21

5 Pin Configuration and Functions

Pin Functions

NAME	PIN		I/O	DESCRIPTION
	NO.	NO.		
	DW	DWW		
GND1	1, 7	2, 8	–	Ground connection for V _{CC1}
GND2	9, 16	9, 15	–	Ground connection for V _{CC2}
INA	4	5	I	Input, channel A
INB	5	6	I	Input, channel B
NC	2, 6, 8, 10, 11, 15	4, 7, 10	–	Not connected
OUTA	13	12	O	Output, channel A
OUTB	12	11	O	Output, channel B
VCC1	3	1	–	Power supply, V _{CC1}
VCC2	14	16	–	Power supply, V _{CC2}
EN2	–	13	I	Output enable 2. Output pins on side 2 are enabled when EN2 is high or open and in high-impedance state when EN2 is low.

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾

		MIN	MAX	UNIT
Supply voltage ⁽²⁾	V_{CC1}, V_{CC2}	-0.5	6	V
Voltage	INx, OUTx	-0.5	$V_{CC} + 0.5^{(3)}$	V
Output Current	I_O	-15	15	mA
Surge Immunity			12.8	kV
Storage temperature, T_{stg}		-65	150	°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.
- (3) Maximum voltage must not exceed 6 V.

6.2 ESD Ratings

			VALUE	UNIT
V _{ESD}	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±6000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1500	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

		MIN	TYP	MAX	UNIT
V_{CC1}, V_{CC2}	Supply voltage	2.25		5.5	V
I_{OH}	High-level output current	$V_{CCO}^{(1)} = 5\text{ V}$	-4		mA
		$V_{CCO} = 3.3\text{ V}$	-2		
		$V_{CCO} = 2.5\text{ V}$	-1		
I_{OL}	Low-level output current	$V_{CCO} = 5\text{ V}$		4	mA
		$V_{CCO} = 3.3\text{ V}$		2	
		$V_{CCO} = 2.5\text{ V}$		1	
V_{IH}	High-level input voltage	$0.7 \times V_{CCI}^{(1)}$		V_{CCI}	V
V_{IL}	Low-level input voltage	0		$0.3 \times V_{CCI}$	V
DR	Signaling rate	0		100	Mbps
T_J	Junction temperature ⁽²⁾	-55		150	°C
T_A	Ambient temperature	-55	25	125	°C

- (1) V_{CCI} = Input-side V_{CC} ; V_{CCO} = Output-side V_{CC} .
- (2) To maintain the recommended operating conditions for T_J , see the [Thermal Information](#) table.

6.4 Thermal Information

THERMAL METRIC		ISO7820		UNIT
		DW (SOIC)	DWW (SOIC)	
		16 PINS	16-PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	84.7	84.7	°C/W
$R_{\theta JC(top)}$	Junction-to-case(top) thermal resistance	47.3	46.0	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	49.4	54.5	°C/W
ψ_{JT}	Junction-to-top characterization parameter	19.1	18.5	°C/W
ψ_{JB}	Junction-to-board characterization parameter	48.8	53.8	°C/W
$R_{\theta JC(bottom)}$	Junction-to-case(bottom) thermal resistance	n/a	n/a	°C/W

6.5 Power Dissipation Characteristics

		VALUE	UNIT
P_D	Maximum power dissipation by ISO7820x	100	mW
P_{D1}	Maximum power dissipation by side-1 of ISO7820x	20	
P_{D2}	Maximum power dissipation by side-2 of ISO7820x	80	

$V_{CC1} = V_{CC2} = 5.5 \text{ V}$, $T_J = 150^\circ\text{C}$,
 $C_L = 15 \text{ pF}$, input a 50 MHz 50% duty cycle square wave

6.6 Electrical Characteristics, 5 V

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V _{OH}	High-level output voltage	I _{OH} = −4 mA; see Figure 7	V _{CC2} − 0.4	V _{CC2} − 0.2		V

6.8 Electrical Characteristics, 2.5 V

$V_{CC1} = V_{CC2} = 2.5 \text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
V _{OH}	High-level output voltage	I _{OH} = −1 mA; see Figure 7	V _{CC2} − 0.4	V _{CC2} − 0.2		V	
V _{OL}	Low-level output voltage	I _{OL} = 1 mA; see Figure 7		0.2	0.4	V	
V _{I(HYS)}	Input threshold voltage hysteresis		0.1 x V _{CC2}			V	
I _{IH}	High-level input current	V _{IH} = V _{CC1} at INx			10	μA	
I _{IL}	Low-level input current	V _{IL} = 0 V at INx	-10				
CMTI	Common-mode transient immunity	V _I = V _{CC1} or 0 V; see Figure 10	100			kV/μs	
I _{CC1}	Supply current, Disable (ISO7820DWW and ISO7820FDWW only)	EN2 = 0V, V _I = 0 V (ISO7820FDWW) , V _I = V _{CC1} (ISO7820DWW)		0.8	1.3	mA	
I _{CC2}				0.2	0.4		
I _{CC1}	Supply current, Disable (ISO7820DWW and ISO7820FDWW only)	EN2 = 0V, V _I = V _{CC1} (ISO7820FDWW) , V _I = 0 V(ISO7820DWW)		3.2	4.6	mA	
I _{CC2}				0.2	0.4		
I _{CC1}	Supply current, DC Signal	V _I = 0 V (ISO7820F) , V _I = V _{CC1} (ISO7820)		0.9	1.3	mA	
I _{CC2}				1.2	1.8		
I _{CC1}	Supply current, DC Signal	V _I = V _{CC1} (ISO7820F) , V _I = 0 V (ISO7820)		3.2	4.6	mA	
I _{CC2}				1.3	2		
I _{CC1}	Supply current	1 Mbps	AC Signal: All channels switching with square wave clock input; C _L = 15 pF	2.1	3	mA	
I _{CC2}				1.3	2		
I _{CC1}	Supply current	10 Mbps		2.1	3	mA	
I _{CC2}				1.8	2.7		
I _{CC1}	Supply current	100 Mbps		2.4	3.2	mA	
I _{CC2}				7	9.1		

6.9 Switching Characteristics, 5 V

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH}, t_{PHL}	Propagation delay time	See Figure 7	6	10.7	16	ns
PWD ⁽¹⁾	Pulse width distortion $ t_{PHL} - t_{PLH} $			0.6	4.6	
$t_{sk(o)}$ ⁽²⁾	Channel-to-channel output skew time				2.5	ns
$t_{sk(pp)}$ ⁽³⁾	Part-to-part skew time				4.5	ns
t_r	Output signal rise time	See Figure 7		2.4	3.9	ns
t_f	Output signal fall time			2.4	3.9	
t_{PHZ}	Disable propagation delay, high-to-high impedance output for ISO7820DWW and ISO7820FDWW	See Figure 8		12	20	ns
t_{PLZ}	Disable propagation delay, low-to-high impedance output for ISO7820DWW and ISO7820FDWW			12	20	ns
t_{PZH}	Enable propagation delay, high impedance-to-high output for ISO7820DWW			10	20	ns
	Enable propagation delay, high impedance-to-high output for ISO7820FDWW			2	2.5	μs
t_{PZL}	Enable propagation delay, high impedance-to-low output for ISO7820DWW			2	2.5	μs
	Enable propagation delay, high impedance-to-low output for ISO7820FDWW			10	20	ns
t_{is}	Default output delay time from input power loss	Measured from the time V_{CC} goes below 1.7 V. See Figure 9		0.2	9	μs
t_e	Time interval error	2^{16} - 1 PRBS data at 100 Mbps		1		ns

- (1) Also known as Pulse Skew.
- (2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.
- (3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

6.10 Switching Characteristics, 3.3 V

 $V_{CC1} = V_{CC2} = 3.3\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH}, t_{PHL}	Propagation delay time	See Figure 7	6	10.8	16	ns
PWD ⁽¹⁾	Pulse width distortion $ t_{PHL} - t_{PLH} $			0.7	4.7	
$t_{sk(o)}$ ⁽²⁾	Channel-to-channel output skew time				2.2	ns
$t_{sk(pp)}$ ⁽³⁾	Part-to-part skew time				4.5	ns
t_r	Output signal rise time	See Figure 7		1.3	3	ns
t_f	Output signal fall time			1.3	3	
t_{PHZ}	Disable propagation delay, high-to-high impedance output for ISO7820DWW and ISO7820FDWW	See Figure 8		17	32	ns
t_{PLZ}	Disable propagation delay, low-to-high impedance output for ISO7820DWW and ISO7820FDWW			17	32	ns
t_{PZH}	Enable propagation delay, high impedance-to-high output for ISO7820DWW			17	32	ns
	Enable propagation delay, high impedance-to-high output for ISO7820FDWW			2	2.5	μs
t_{PZL}	Enable propagation delay, high impedance-to-low output for ISO7820DWW			2	2.5	μs
	Enable propagation delay, high impedance-to-low output for ISO7820FDWW			17	32	ns
t_{is}	Default output delay time from input power loss	Measured from the time V_{CC} goes below 1.7 V. See Figure 9		0.2	9	μs
t_e	Time interval error	2^{16} - 1 PRBS data at 100 Mbps		1		ns

- (1) Also known as Pulse Skew.
- (2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.
- (3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

6.11 Switching Characteristics, 2.5 V

 $V_{CC1} = V_{CC2} = 2.5 \text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay time	See Figure 7	7.5	11.7	17.5	ns
PWD ⁽¹⁾	Pulse width distortion $ t_{PHL} - t_{PLH} $			0.7	4.7	
$t_{sk(o)}$ ⁽²⁾	Channel-to-channel output skew time				2.2	ns
$t_{sk(pp)}$ ⁽³⁾	Part-to-part skew time				4.5	
t_r	Output signal rise time	See Figure 7		1.8	3.5	ns
t_f	Output signal fall time			1.8	3.5	
t_{PHZ}	Disable propagation delay, high-to-high impedance output for ISO7820DWW and ISO7820FDWW	See Figure 8		22	45	ns
t_{PLZ}	Disable propagation delay, low-to-high impedance output for ISO7820DWW and ISO7820FDWW			22	45	ns
t_{PZH}	Enable propagation delay, high impedance-to-high output for ISO7820DWW			18	45	ns
	Enable propagation delay, high impedance-to-high output for ISO7820FDWW			2	2.5	μs
t_{PZL}	Enable propagation delay, high impedance-to-low output for ISO7820DWW			2	2.5	μs
	Enable propagation delay, high impedance-to-low output for ISO7820FDWW			18	45	ns
t_{fs}	Default output delay time from input power loss	Measured from the time V_{CC} goes below 1.7 V. See Figure 9		0.2	9	μs
t_e	Time interval error	$2^{16} - 1$ PRBS data at 100 Mbps		1		ns

(1) Also known as Pulse Skew.

(2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

Figure 6. Propagation Delay Time vs Free-Air Temperature

7 Parameter Measurement Information

- The input pulse is supplied by a generator having the following characteristics: $PRR \leq 50$ kHz, 50% duty cycle, $t_r \leq 3$ ns, $t_f \leq 3$ ns, $Z_O = 50 \Omega$. At the input, 50Ω resistor is required to terminate Input Generator signal. It is not needed in actual application.
- $C_L = 15$ pF and includes instrumentation and fixture capacitance within $\pm 20\%$.

Figure 7. Switching Characteristics Test Circuit and Voltage Waveforms

- The input pulse is supplied by a generator having the following characteristics: $PRR \leq 10$ kHz, 50% duty cycle, $t_r \leq 3$ ns, $t_f \leq 3$ ns, $Z_O = 50 \Omega$.
- $C_L = 15$ pF and includes instrumentation and fixture capacitance within $\pm 20\%$.

8 Detailed Description

8.1 Overview

ISO7820 employs an ON-OFF Keying (OOK) modulation scheme to transmit the digital data across a silicon dioxide based isolation barrier. The transmitter sends a high frequency carrier across the barrier to represent one digital state and sends no signal to represent the other digital state. The receiver demodulates the signal after advanced signal conditioning and produces the output through a buffer stage. These devices also incorporate advanced circuit techniques to maximize the CMTI performance and minimize the radiated emissions due the high frequency carrier and IO buffer switching. The conceptual block diagram of a digital capacitive isolator, [Figure 11](#), shows a functional block diagram of a typical channel.

8.2 Functional Block Diagram

Figure 11. Conceptual Block Diagram of a Digital Capacitive Isolator

Also a conceptual detail of how the ON/OFF Keying scheme works is shown in [Figure 12](#).

Figure 12. On-Off Keying (OOK) Based Modulation Scheme

8.3 Feature Description

ISO7820 is available in two channel configurations and default output state options to enable a variety of application uses.

PRODUCT	CHANNEL DIRECTION	RATED ISOLATION	MAX DATA RATE	DEFAULT OUTPUT
ISO7820	2 Forward, 0 Reverse	5700 V _{RMS} / 8000 V _{PK} ⁽¹⁾	100 Mbps	High
ISO7820F	2 Forward, 0 Reverse	5700 V _{RMS} / 8000 V _{PK} ⁽¹⁾	100 Mbps	Low

(1) See the [Regulatory Information](#) section for detailed isolation ratings.

8.3.1 High Voltage Feature Description

NOTE

This coupler is suitable for 'safe electrical insulation' only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.

**Table 1. Package Insulation and Safety-Related Specifications
(over recommended operating conditions (unless otherwise noted))**

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
CLR	External clearance	Shortest terminal-to-terminal distance through air	DW-16	8		mm
			DWW-16	14.5		
CPG	External creepage	Shortest terminal-to-terminal distance across the package surface	DW-16	8		mm
			DWW-16	14.5		
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112; UL 746A	600			V
R _{IO}	Isolation resistance, input to output ⁽¹⁾	V _{IO} = 500 V, T _A = 25°C	10 ¹²			Ω
		V _{IO} = 500 V, 100°C ≤ T _A ≤ max	10 ¹¹			Ω
C _{IO}	Barrier capacitance, input to output ⁽¹⁾	V _{IO} = 0.4 x sin (2πft), f = 1 MHz		1		pF
C _I	Input capacitance ⁽²⁾	V _I = V _{CC} /2 + 0.4 x sin (2πft), f = 1 MHz, V _{CC} = 5 V		2		pF

(1) All pins on each side of the barrier tied together creating a two-terminal device.

(2) Measured from input pin to ground.

NOTE

Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance.

Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

Table 2. Insulation Characteristics

PARAMETER		TEST CONDITIONS	SPECIFICATION		UNIT
			DW	DWW

Certificate number: 40040142	Master contract number: 220991	File number: E181974	Certificate number: CQC15001121716	Client ID number: 77311

8.3.1.2 Safety Limiting Values

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

Table 5. Safety Limiting

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_S	Safety input, output, or supply current for DW-16 package and DWW-16 Packages	$R_{\theta JA} = 84.7^{\circ}\text{C/W}$, $V_I = 5.5\text{ V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$		268	mA
		$R_{\theta JA} = 84.7^{\circ}\text{C/W}$, $V_I = 3.6\text{ V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$		410	
		$R_{\theta JA} = 84.7^{\circ}\text{C/W}$, $V_I = 2.75\text{ V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$		537	
P_S	Safety input, output, or total power	$R_{\theta JA} = 84.7^{\circ}\text{C/W}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$		1476	mW
T_S	Maximum safety temperature			150	$^{\circ}\text{C}$

The maximum safety temperature is the maximum junction temperature specified for the device. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the is that of a device installed on a High-K test board for Leaded Surface Mount Packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

Figure 13. Thermal Derating Curve for Safety Limiting Current per VDE

Figure 14. Thermal Derating Curve for Safety Limiting Power per VDE

8.4 Device Functional Modes

ISO7820 functional modes are shown in [Table 6](#).

Table 6. ISO7820 Function Table⁽¹⁾

V _{CCI}	V _{CCO}	INPUT (INx) ⁽²⁾	OUTPUT ENABLE (EN2) (DWW Package Only)	OUTPUT (OUTx)	COMMENTS
PU	PU	H	H or open	H	Normal Operation: A channel output assumes the logic state of its input.
		L	H or open	L	
		Open	H or open	Default	Default mode: When INx is open, the corresponding channel output goes to its default high logic state. Default= High for ISO7820 and Low for ISO7820F.
X	PU	X	L	Z	A low value of Output Enable causes the outputs to be high-impedance.
PD	PU	X	H or open	Default	Default mode: When V _{CCI} is unpowered, a channel output assumes the logic state based on the selected default option. Default= High for ISO7820 and Low for ISO7820F. When V _{CCI} transitions from unpowered to powered-up, a channel output assumes the logic state of its input. When V _{CCI} transitions from powered-up to unpowered, channel output assumes the selected default state.
X	PD	X	X	Undetermined	When V _{CCO} is unpowered, a channel output is undetermined ⁽³⁾ . When V _{CCO} transitions from unpowered to powered-up, a channel output assumes the logic state of its input

(1) V_{CCI} = Input-side V_{CC}; V_{CCO} = Output-side V_{CC}; PU = Powered up (V_{CC} ≥ 2.25 V); PD = Powered down (V_{CC} ≤ 1.7 V); X = Irrelevant; H = High level; L = Low level; Z = High impedance

(2) A strongly driven input signal can weakly power the floating V_{CC} via an internal protection diode and cause undetermined output.

(3) The outputs are in undetermined state when 1.7 V < V_{CCI}, V_{CCO} < 2.25 V.

9 Applications and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The ISO7820 is a high-performance, dual-channel digital isolator with 5.7 kV_{RMS} isolation voltage per UL 1577. It utilizes single-ended CMOS-logic switching technology. Its supply voltage range is from 2.25 V to 5.5 V for both supplies, V_{CC1} and V_{CC2}. When designing with digital isolators, it is important to keep in mind that due to the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is, μ C or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

9.2 Typical Application

ISO7820F can be used to isolate power MOSFETs from sensitive logic circuitry in Switch Mode Power Supplies (SMPS) as shown below.

Figure 16. Isolated Switch Mode Power Supply

9.2.1 Design Requirements

For the ISO7820, use the parameters shown in [Table 7](#).

Table 7. Design Parameters

PARAMETER	VALUE
Supply voltage	2.25 V to 5.5 V
Decoupling capacitor between V _{CC1} and GND1	0.1 μ F
Decoupling capacitor from V _{CC2} and GND2	0.1 μ F

9.2.2 Detailed Design Procedure

Unlike optocouplers, which need external components to improve performance, provide bias, or limit current, ISO7820 only needs two external bypass capacitors to operate.

Figure 17. Typical ISO7820 Circuit Hook-up

9.2.2.1 Electromagnetic Compatibility (EMC) Considerations

Many applications in harsh industrial environment are sensitive to disturbances such as electrostatic discharge (ESD), electrical fast transient (EFT), surge and electromagnetic emissions. These electromagnetic disturbances are regulated by international standards such as IEC 61000-4-x and CISPR 22. Although system-level performance and reliability depends, to a large extent, on the application board design and layout, the ISO7820 incorporate many chip-level design improvements for overall system robustness. Some of these improvements include:

- Robust ESD protection for input and output signal pins and inter-chip bond pads.
- Low-resistance connectivity of ESD cells to supply and ground pins.
- Enhanced performance of high voltage isolation capacitor for better tolerance of ESD, EFT and surge events.
- Bigger on-chip decoupling capacitors to bypass undesirable high energy signals through a low impedance path.
- PMOS and NMOS devices isolated from each other by using guard rings to avoid triggering of parasitic SCRs.
- Reduced common mode currents across the isolation barrier by ensuring purely differential internal operation.

9.2.3 Application Performance Curve

Typical eye diagram of ISO7820 indicate low jitter and wide open eye at the maximum data rate of 100 Mbps.

Figure 18. Eye Diagram at 100 Mbps PRBS, 5 V and 25°C

10 Power Supply Recommendations

To ensure reliable operation at all data rates and supply voltages, a 0.1 μF bypass capacitor is recommended at input and output supply pins (V_{CC1} and V_{CC2}). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments' [SN6501](#). For such applications, detailed power supply design and transformer selection recommendations are available in [SN6501](#) datasheet ([SLLSEA0](#)) .

11 Layout

11.1 PCB Material

For digital circuit boards operating below 150 Mbps, (or rise and fall times higher than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 epoxy-glass as PCB material. FR-4 (Flame Retardant 4) meets the requirements of Underwriters Laboratories UL94-V0, and is preferred over cheaper alternatives due to its lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and its self-extinguishing flammability-characteristics.

11.2 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 19](#)). Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/in².
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power / ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, see Application Note [SLLA284](#), *Digital Isolator Design Guide*.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
