TEXAS INSTRUMENTS

TPS22860

SLVSD04 – APRIL 2015

TPS22860 Ultra-Low Leakage Load Switch

1 Features

- Integrated Single Channel Load Switch
- Bias Voltage Range (V_{BIAS}): 1.65 V to 5.5 V
- Input Voltage Range: 0 V to V_{BIAS}
- ON-Resistance (R_{ON})
  - R_{ON} = 0.73 Ω at VIN = 5 V (V_{BIAS} = 5 V)
  - R_{ON} = 0.68 Ω at VIN = 3.3 V (V_{BIAS} = 5 V)
  - R_{ON} = 0.63 Ω at VIN = 1.8 V (V_{BIAS} = 5 V)
- 200 mA Maximum Continuous Switch Current
- Ultra-Low Leakage Current
  - V_{IN} Leakage Current = 2 nA
  - V_{BIAS} Leakage Current at 5.5 V = 10 nA
- 6-pin SOT-23 or SC70 Package
- ESD Performance Tested per JESD 22
  - 2 kV HBM and 1 kV CDM

2 Applications

- Wearables
- Internet of Things
- Wireless Sensor Networks

3 Description

The TPS22860 is a small, ultra-low leakage current, single channel load switch. The device requires a V_{BIAS} voltage and can operate over an input voltage range of 0 V to V_{BIAS}. It can support a maximum continuous current of 200 mA. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22860 is available in two small, space-saving 6-pin SOT-23 and SC70 packages. The device is characterized for operation over the free-air temperature range of –40°C to 85°C.

Device Information[1]

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS22860	SOT-23	2.80 x 2.90 mm
	SC-70	2.10 x 2.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Revision History

DATE	REVISION	NOTES
April 2015	*	Initial release.

6 Pin Configuration and Functions

Top View

Pin Functions

PIN		I/O	DESCRIPTION
NAME	**NO.**		
V_{OUT}	1	O	Switch output.
GND	2	—	Ground
NC	3	—	No connect
V_{IN}	4	I	Switch input. Connect a ceramic capacitor from V_{IN} to GND.
V_{BIAS}	5	I	Bias voltage. Power supply to the device.
ON	6	I	Active high switch control input. Do not leave floating.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) [1]

		MIN	MAX	UNIT[2]
V_{BIAS}	BIAS voltage range	−0.5	6.5	V
V_{IN}	Input voltage range	−0.5	V_{BIAS} + 0.5	V
V_{OUT}	Output voltage range	−0.5	V_{BIAS} + 0.5	V
V_{ON}	Input voltage range	−0.5	6.5	V
I_{MAX}	Maximum Continuous Switch Current		200	mA
I_{PLS}	Maximum Pulsed Switch Current, pulse <300us, 2% duty cycle		400	mA
T_A	Operating free-air temperature range[3]	−40	85	°C
T_J	Maximum junction temperature		125	°C
T_{STG}	Storage temperature	−65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to network ground terminal.
(3) Inapplications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature [$T_{A(max)}$] is dependent on the maximum operating junction temperature [$T_{J(max)}$], the maximum power dissipation of the device in the application [$P_{D(max)}$], and the junction-to-ambient thermal resistance of the part/package in the application ($θ_{JA}$), as given by the following equation: $T_{A(max)} = T_{J(max)} − (M JA × P_{D(max)})$

7.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001[1]	2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101[2]	1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{IN}	Input voltage range		0		V_{BIAS}	V
V_{BIAS}	Supply voltage range		1.65		5.5	V
V_{ON}	Control input voltage range		0		5.5	V
V_{OUT}	Output voltage range		0		V_{BIAS}	V
$V_{IH, ON}$	High-level input voltage, ON	V_{BIAS} = 5 V	2.4		5.5	V
$V_{IL, ON}$	Low-level input voltage, ON	V_{BIAS} = 5 V	0		0.8	V
C_{IN}	Input Capacitor		1			µF

7.4 Thermal Information

	THERMAL METRIC[1][2]	TPS22860		UNIT
		DBV	DCK	
		6 PINS	6 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	235.2	249.0	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	164.8	107.7	
$R_{\theta JB}$	Junction-to-board thermal resistance	82,.5	95.8	
ψ_{JT}	Junction-to-top characterization parameter	52.9	6.2	
ψ_{JB}	Junction-to-board characterization parameter	82.0	93.7	

(1)   For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.
(2)   For thermal estimates of this device based on PCB copper area, see the TI PCB Thermal Calculator.

7.5 Electrical Characteristics

over operating free-air temperature range[1] (unless otherwise noted)

PARAMETER		TEST CONDITIONS			MIN	TYP	MAX	UNIT
POWER SUPPLIES AND CURRENTS								
$I_{Q, VBIAS}$	V_{BIAS} quiescent current	I_{OUT} = 0, V_{IN} = V_{ON} = V_{BIAS} = 3.3 V				10	100	nA
$I_{SD, VBIAS}$	V_{BIAS} shutdown current	V_{ON} = 0 V				10	100	
$I_{SD, VIN}$	V_{IN} shutdown current	V_{ON} = 0 V, V_{OUT} = 1 V	V_{IN} = 3.0 V			2	50	
I_{ON}	ON pin input leakage current	V_{ON} = 5.5 V					100	
RESISTANCE CHARACTERISTICS								
R_{ON}	ON-state resistance	I_{OUT} = −100 mA, V_{BIAS} = 3.3 V	V_{IN} = 3.3 V	T_A = 25°C		0.92	1.15	Ω
				Full T_A			1.31	
			V_{IN} = 2 V	T_A = 25°C		1.2	1.5	
				Full T_A			1.7	
			V_{IN} = 1.8 V	T_A = 25°C		0.95	1.2	
				Full T_A			1.35	

(1)   Over the operating ambient temp −40°C ≤ TA ≤ 85°C (full) and VBIAS = 3.3V. Typical values are for TA = 25°C. (unless otherwise noted)

7.6 Switching Characteristics

over operating free-air temperature range[1] (unless otherwise noted)

PARAMETER		TEST CONDITIONS			MIN	TYP	MAX	UNIT
t_{ON}	Turn-on time	V_{OUT} = V_{BIAS}, R_L = 50 Ω C_L = 35 pF	T_A = 25°C	V_{BIAS} = 3.3 V	2	4.5	13	ns
			Full T_A	V_{BIAS} = 3 V to 3.6 V	1		15	
t_{OFF}	Turn-off time	V_{OUT} = V_{BIAS}, R_L = 50 Ω C_L = 35 pF	T_A = 25°C	V_{BIAS} = 3.3 V	3	9	15	ns
			Full T_A	V_{BIAS} = 3 V to 3.6 V	2		20	
$t_{ON/OFF}$	ON/OFF delay time					See Figure 9

8 Detailed Description

8.1 Overview

The TPS22860 is a small, ultra-low leakage current, single channel bi-driectional load switch. The device requires a V_{BIAS} voltage and can operate over an input voltage range of 0 V to V_{BIAS}. It can support a maximum continuous current of 200 mA. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22860 is available in two small, space-saving 6-pin SOT-23 and SC70 packages. The device is characterized for operation over the free-air temperature range of –40°C to 85°C.

8.2 Functional Block Diagram
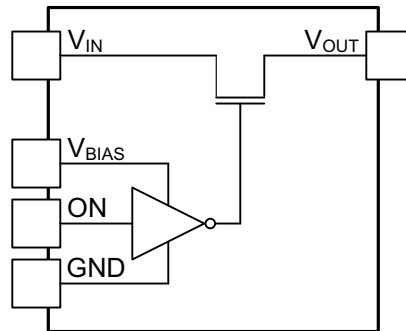

8.3 Feature Description

8.3.1 ON/OFF Control

The ON input controls the load switch with positive logic.

8.3.2 Pass Transistor

The TPS22860 supports up to 200-mA current flow in either direction. R_{ON} is dependent on V_{BIAS} as shown in Figure 1, Figure 2, and Figure 3.

9 Application and Implementation

> **NOTE**
> Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

This section will highlight some of the design considerations when implementing this device in a common application.

9.2 Typical Application

The TPS22860 IC is a high side load switch. The TPS22860 internal components are rated for 1.65-V to 5.5-V supply and support up to 200 mA of load current. The TPS22860 can be used in a variety of applications. Figure 8 below shows a general application of TPS22860 to control the load inrush current.

Figure 8. Standard Load Switching Application

9.2.1 Design Requirements

Table 2. Component Table

COMPONENT	DESCRIPTION
C_{IN}	Input capacitance[1]
LOAD	Load resistance and capacitance will affect the output rise time

(1) Required for load inrush current (slew rate) control

9.2.2 Detailed Design Procedure

9.2.2.1 Inrush Current

To limit the voltage drop on the input supply caused by transient inrush currents when the switch turns on into a discharged load capacitor, a capacitor must be placed between V_{IN} and GND. A 1-µF ceramic capacitor, C_{IN}, placed close to the pins, is usually sufficient. Higher values of C_{IN} can be used to further reduce the voltage drop during high-current applications. When switching heavy loads, TI recommends to have an input capacitor about 10× higher than the output capacitor to avoid excessive voltage drop. Do not float the ON pin.

9.2.2.2 ON/OFF Interface

The load switch is controlled by the voltage at the ON pin. To turn ON, the input voltage must be larger than V_{IH} and to turn off the voltage must be below V_{IL}.

In applications where an ON/OFF signal is not available, connect ON pin to V_{IN}. The TPS22860 will turn ON/OFF in sync with the input supply connected to V_{IN}.

> **NOTE**
>
> Connect a pull down resistor from the ON pin to GND when the ON/OFF signal is driven by a high-impedance (tri-state) driver.
9.2.3 Application Curves

Figure 9. t_{ON} and t_{OFF} vs V_{BIAS}

Figure 10. t_{ON} and t_{OFF} vs Temperature (V_{BIAS} = 5 V)

10 Power Supply Recommendations

The device is designed to operate from a VIN range of 1.65 V to 5.5 V. This supply must be well regulated and placed as close to the device terminal as possible with the recommended 1-µF bypass capacitor. If the supply is located more than a few inches from the device terminals, additional bulk capacitance may be required in addition to the ceramic bypass capacitors. If additional bulk capacitance is required, an electrolytic, tantalum, or ceramic capacitor of 1 µF may be sufficient.

11 Layout

11.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- V_{IN} and V_{OUT} traces should be as short and wide as possible to accommodate for high current.
- The V_{IN} pin should be bypassed to ground with low ESR ceramic bypass capacitors. The typical recommended bypass capacitance is 1-µF ceramic with X5R or X7R dielectric. This capacitor should be placed as close to the device pins as possible.
- The VOUT pin should be bypassed to ground with low ESR ceramic bypass capacitors. The typical recommended bypass capacitance is one-tenth of the V_{IN} bypass capacitor of X5R or X7R dielectric rating. This capacitor should be placed as close to the device pins as possible.

11.2 Thermal Reliability

For higher reliability it is recommended to limit TPS22860 IC's die junction temperature to less than 105°C. The IC junction temperature is directly proportional to the on-chip power dissipation. Use the following equation to calculate maximum on-chip power dissipation to achieve the maximum die junction temperature target:

$$PD_{(MAX)} = \left(T_{J(MAX)} - T_A\right) \Big/ \theta_{JA}$$

Where:

$T_{J(MAX)}$ is the target maximum junction temperature.

T_A is the operating ambient temperature.

$R_{\theta JA}$ is the package junction to ambient thermal resistance. (1)

11.3 Improving Package Thermal Performance

The package $R_{\theta JA}$ value under standard conditions on a High-K board is listed in the *Thermal Information* table. $R_{\theta JA}$ value depends on the PC board layout. An external heat sink and/or a cooling mechanism, like a cold air fan, can help reduce $R_{\theta JA}$ and thus improve device thermal capabilities. Refer to TI's design support web page at www.ti.com/thermal for a general guidance on improving device thermal performance.

12.1 Trademarks

All trademarks are the property of their respective owners.

12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.3 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGE OPTION ADDENDUM

(1) Status: For more details on status, see our product life cycle.

(2) Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
