

TPS383x 150-nA, Ultralow Power, Supply Voltage Monitor

1 Features

- Ultralow Supply Current: 150 nA (Typical)
- Operating Supply Voltage: 0.9 V to 6.5 V
- Valid Reset for $V_{DD} > 0.6$ V
- Push-Pull $\overline{\text{RESET}}$ Output
- Factory-Trimmed Reset Threshold Voltages
- Temperature Range: -40°C to 85°C
- Packages: 1-mm $\times$ 1-mm X2SON or 3-Pin SOT23

2 Applications

- Portable and Battery-Powered Equipment
- Metering
- Industrial Equipment
- Cell Phones
- Glucose Monitors
- Tablets
- Wearables

3 Description

The TPS3831 and TPS3839 devices (both referred to as *TPS383x*) are ultralow current (150 nA, typical), voltage supervisory circuits that monitor a single voltage. Both devices initiate an active-low reset signal whenever the V_{DD} supply voltage drops below the factory-trimmed reset threshold voltage. The reset output remains low for 200 ms (typical) after the V_{DD} voltage rises above the threshold voltage and hysteresis. These devices are designed to ignore fast transients on the VDD pin. The TPS3831 device includes a manual reset input that forces $\overline{\text{RESET}}$ low when MR is low.

The ultralow current consumption of 150 nA makes these voltage supervisors ideal for use in low-power and portable applications. The TPS383x devices are specified to have the correct output logic state for supply voltages down to 0.6 V.

The TPS383x devices feature precision factory-trimmed threshold voltages and extremely low-power operation. The TPS3831 device is available in a 4-pin, 1-mm $\times$ 1-mm (DQN) X2SON package. The TPS3839 device is available in a 3-pin SOT23 (DBZ) package or a 4-pin, 1-mm $\times$ 1-mm (DQN) X2SON package.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	PACKAGE SIZE (NOM)
TPS3831	X2SON (4)	1.00 mm $\times$ 1.00 mm
TPS3839	SOT-23 (3)	2.92 mm $\times$ 2.37 mm
	X2SON (4)	1.00 mm $\times$ 1.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (February 2015) to Revision D	Page
• Changed μA to nA in document title.....	1
• Added TPS3839G25 to document	1
• Changed <i>Applications</i> section: moved <i>Metering</i> bullet to second in list, changed <i>Tablets</i> bullet, added <i>Wearables</i> bullet..	1
• Changed first paragraph of <i>Description</i> section	1
• Changed <i>Device Information</i> table: changed Package Size column heading and value of SOT-23 row	1
• Added TPS3839G25 row to <i>Device Options</i> table	4
• Changed <i>Thermal Information</i> table	6
• Changed V_{IT-} and V_{hys} parameters in Electrical Characteristics table: changed test conditions, added TPS3839G25 rows	7

Changes from Revision B (April 2013) to Revision C	Page
• Added <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section	1
• Changed title of data sheet	1
• Changed Operating Supply Voltage bullet from 0.6 V to 0.9 V.....	1
• Changed last sentence of <i>Description</i> section	1
• Changed front page figure	1
• Added $\overline{\text{MR}}$ parameter to <i>Absolute Maximum Ratings</i>	6
• Changed condition statement for <i>Electrical Characteristics</i>	7
• Changed $V_{(VO)}$ parameter symbol to V_{POR}	7
• Changed Figure 1	8
• Changed <i>Functional Block Diagram</i> ; added hysteresis symbol to op amp	11
• Deleted <i>Typical Application Circuit</i> figure	13

Pin Functions

NAME	PIN			I/O	DESCRIPTION
	TPS3839 (SOT23-3)	TPS3839 (X2SON)	TPS3831 (X2SON)		
GND	1	3	3	—	Ground
$\overline{\text{MR}}$	N/A	N/A	2	I	Manual reset. Pull this pin to a logic low to assert the $\overline{\text{RESET}}$ output. After the $\overline{\text{MR}}$ pin is deasserted, the $\overline{\text{RESET}}$ output deasserts after the reset delay (t_d) elapses.
NC	N/A	2	N/A	—	No internal connection.
$\overline{\text{RESET}}$	2	1	1	O	Active-low reset output. $\overline{\text{RESET}}$ has a push-pull output drive and is capable of directly driving input pins. $\overline{\text{RESET}}$ is low as long as V_{DD} remains below the factory threshold voltage, and until the delay time (t_d) elapses after V_{DD} rises above the threshold voltage.
Thermal pad	N/A	Available	Available	—	Connect to ground or to a floating copper plane for mechanical stability.
VDD	3	4	4	I	Supply voltage

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range, unless otherwise noted⁽¹⁾

		MIN	MAX	UNIT
Voltage	V _{DD} , $\overline{\text{RESET}}$	−0.3	7	V
	$\overline{\text{MR}}$	−0.3	V _{DD} + 0.3	V
Current	$\overline{\text{RESET}}$ pin	−10	10	mA
Temperature ⁽²⁾	Operating ambient, T _A	−40	85	°C
	Storage, T _{stg}	−65	150	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) As a result of the low dissipated power in this device, the junction temperature is assumed to be equal to the ambient temperature.

7.2 ESD Ratings

		VALUE	UNIT
V _(ESD) Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
	Charged device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V _{DD}	Input supply voltage	0.9		6.5	V
V _{MR}	Manual reset pin voltage	0		V _{DD}	V
V $\overline{\text{RESET}}$	$\overline{\text{RESET}}$ pin voltage	0		6.5	V
I $\overline{\text{RESET}}$	$\overline{\text{RESET}}$ pin current	0		8	mA

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS3839	TPS3831, TPS3839	UNIT

8 Detailed Description

8.1 Overview

The TPS3831 and TPS3839 are ultralow current voltage supervisory circuits that monitor the input supply voltage of these devices. Both devices assert an active-low reset whenever the V_{DD} supply voltage drops below the negative-going threshold voltage (V_{IT-}). The output, $\overline{\text{RESET}}$, remains asserted for approximately 200 ms after the V_{DD} voltage rises above the positive-going threshold voltage ($V_{IT-} + V_{hys}$). These devices are designed to ignore fast transients on the VDD pin.

The TPS3831 device includes a manual reset input ($\overline{\text{MR}}$) that can be used to force the $\overline{\text{RESET}}$ signal low, even if the supply voltage is above V_{IT-} .

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 VDD Transient Rejection

The TPS383x (TPS3831 and TPS3839) devices have built-in rejection of fast transients on the VDD pin. Transient rejection depends on both the duration and amplitude of the transient. Transient amplitude is measured from the bottom of the transient to the negative threshold voltage (V_{IT-}) of the device, as shown in Figure 12.

Figure 12. Voltage Transient Measurement

Feature Description (continued)

Figure 13 shows the relationship between the transient amplitude and duration required to trigger a reset. Any combination of duration and amplitude greater than that shown in Figure 13 generates a reset signal.

Figure 13. TPS3839 Transient Rejection

8.3.2 Manual Reset ($\overline{\text{MR}}$) Input (TPS3831 Only)

The manual reset ($\overline{\text{MR}}$) input allows a processor, or other logic devices, to initiate a reset (TPS3831 device only). A logic low ($0.3 V_{\text{DD}}$) on $\overline{\text{MR}}$ causes $\overline{\text{RESET}}$ to assert. After $\overline{\text{MR}}$ returns to a logic high and V_{DD} is greater than the threshold voltage, $\overline{\text{RESET}}$ is deasserted after the reset delay time, t_d , elapses. $\overline{\text{MR}}$ is internally tied to V_{DD} with a 20-k Ω resistor; therefore, this pin can be left unconnected if $\overline{\text{MR}}$ is not used. If a logic signal driving $\overline{\text{MR}}$ does not go fully to V_{DD} , some additional current draws into V_{DD} as a result of the internal pullup resistor on $\overline{\text{MR}}$. To minimize current draw, a logic-level FET can be used, as shown in Figure 14.

Figure 14. Using a Logic-Level FET to Minimize Current Draw

8.4 Device Functional Modes

8.4.1 Normal Operation ($V_{\text{DD}} > V_{\text{DD}(\text{min})}$)

When the voltage on V_{DD} is greater than $V_{\text{DD}(\text{min})}$, the $\overline{\text{RESET}}$ output corresponds to the voltage on the V_{DD} pin relative to $V_{\text{IT-}}$.

8.4.2 Below $V_{\text{DD}(\text{min})}$ ($V_{(\text{POR})} < V_{\text{DD}} < V_{\text{DD}(\text{min})}$)

When the voltage on V_{DD} is less than $V_{\text{DD}(\text{min})}$ but greater than the power-on reset voltage ($V_{(\text{POR})}$), the $\overline{\text{RESET}}$ output is asserted.

8.4.3 Below Power-On Reset ($V_{\text{DD}} < V_{(\text{POR})}$)

When the voltage on V_{DD} is lower than the power-on reset voltage ($V_{(\text{POR})}$), the $\overline{\text{RESET}}$ output is undefined. Do not rely on the $\overline{\text{RESET}}$ output for proper device function under this condition.

9 Applications and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

Low operating voltage and threshold options make the TPS383x devices well-suited for monitoring single-cell, alkaline-battery applications.

9.2 Typical Application

Figure 15 shows the TPS3839A09 used to disable a boost converter when the cell voltage reaches 0.9 V, which is the end of the discharge voltage for a single alkaline battery cell. When the cell voltage reaches 0.9 V, the TPS61261 enable pin is driven low. This setting disables the TPS61261 and places it in a low-current shutdown state. The combination of the TPS3839 and TPS61261 devices consumes only 250 nA (typical) from the discharged battery.

Figure 15. Disabled Boost Converter

9.2.1 Design Requirements

Table 1 lists the design requirements for Figure 15.

Table 1. Design Requirements and Results

DESIGN REQUIREMENTS	DESIGN RESULT		
	TPS3839A09	TPS61261	COMBINED
Input voltage range of 0.9 V to 1.7 V	0.9 V to 6.5 V	0.8 V to 4 V	0.9 V to 4 V
Shutdown current < 3 µA	0.5 µA (maximum)	1.5 µA (maximum)	2.0 µA (maximum)
Output voltage of 3.3 V	N/A	3.3 V	3.3 V
Output current of 50 mA	N/A	100 mA	100 mA
Switching frequency ≥ 1 MHz	N/A	2.5 MHz	2.5 MHz

9.2.2 Detailed Design Procedure

9.2.2.1 Input Capacitor

The TPS383x devices use a unique sampling scheme to maintain an extremely low average quiescent current of 150 nA. The TPS383x devices typically consume only approximately 100 nA of dc current. However, this current rises to approximately 15 μ A for about 200 μ s when the TPS383x devices sample the input voltage. If the source impedance back to the supply voltage is high, then the additional current during sampling may trigger a false reset as a result of the apparent voltage drop at VDD. For applications with high-impedance input supplies (including trace impedance), TI recommends adding a small 0.1- μ F bypass capacitor near the TPS3839 VDD pin. This bypass capacitor effectively keeps the average current at 150 nA and reduces the effects of a high-impedance voltage source.

9.2.2.2 Bidirectional Reset Pins

Some devices have bidirectional reset pins that act both as an input and an output. For applications where the TPS383x devices drive a bidirectional reset pin, place a series resistor between the TPS383x output and the reset pin to protect against excessive current flow when both the TPS383x devices and the reset pin attempt to drive the reset line. [Figure 16](#) shows the connection of the TPS3839K33 to a bidirectional reset pin of a microcontroller using a series resistor.

Figure 16. Connection to a Bidirectional Reset Pin

9.2.3 Application Curve

Figure 17. Supply Current vs Temperature

10 Power Supply Recommendations

These devices are designed to operate from an input supply with a voltage range between 0.9 V and 6.5 V. Use a low-impedance power supply to eliminate inaccuracies caused by the extra current during the input-voltage sampling discussed in the [Input Capacitor](#) section.

11 Layout

11.1 Layout Guidelines

Make sure the connection to the VDD pin is low impedance and able to carry 15 μ A without a significant voltage drop. Place a 0.1- μ F bypass capacitor near the VDD pin if the 15- μ A sampling current causes too much voltage droop.

11.2 Layout Example

Figure 18. Recommended Layout

12 Device and Documentation Support

12.1 Device Support

12.1.1 Development Support

12.1.1.1 Evaluation Modules

Two evaluation modules (EVMs) are available to assist in the initial circuit performance evaluation using the TPS3831 and TPS3839. The [TPS3831G33EVM-187](#) and [TPS3839K33EVM-112](#) evaluation modules (and related user's guides) can be requested at the TI website through the product folders or purchased directly from the [TI eStore](#).

12.1.1.2 Spice Models

Computer simulation of circuit performance using SPICE is often useful when analyzing the performance of analog circuits and systems. SPICE models for the TPS3831 and TPS3839 devices are available through each of the product folders under *Tools & Software*.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

4214838/F 08/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.
5. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE
SCALE:15X

SOLDER MASK DETAILS

4214838/F 08/2024

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE
BASED ON 0.125 THICK STENCIL
SCALE:15X

4214838/F 08/2024

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

DQN 4

GENERIC PACKAGE VIEW

X2SON - 0.4 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

4210367/F

4215302/E 12/2016

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for optimal thermal and mechanical performance.
4. Features may not exist. Recommend use of pin 1 marking on top of package for orientation purposes.
5. Shape of exposed side leads may differ.
6. Number and location of exposed tie bars may vary.

LAND PATTERN EXAMPLE
SCALE: 40X

SOLDER MASK DETAIL

4215302/E 12/2016

NOTES: (continued)

7. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/sluea271).
8. If any vias are implemented, it is recommended that vias under paste be filled, plugged or tented.

SOLDER PASTE EXAMPLE
 BASED ON 0.075 - 0.1mm THICK STENCIL

EXPOSED PAD
 88% PRINTED SOLDER COVERAGE BY AREA
 SCALE: 60X

4215302/E 12/2016

NOTES: (continued)

9. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
