

TPD4E001 高速データ インターフェイス用の低容量、4 チャネル ESD 保護

1 特長

- IEC 61000-4-2 ESD 保護 (レベル 4)
 - 接触放電: $\pm 8\text{kV}$
 - 空中放電: $\pm 15\text{kV}$
- 5.5A ピーク パルス電流 (8/20 μs のパルス)
- IO 容量 1.5pF (標準値)
- 低リーク電流:1nA (最大値)
- 低消費電流:1nA
- 0.9V ~ 5.5V の動作電源電圧範囲
- 省スペースの DRL、DBV、DCK、DPK、DRS パッケージ オプション
- 2、3、6 チャネルの代替オプションを利用可能:
TPD2E001、TPD3E001、TPD6E001

2 アプリケーション

- USB 2.0
- イーサネット
- FireWire™ シリアル バス
- LVDS
- SVGA ビデオ接続
- 血糖値測定器

3 概要

TPD4E001 は、静電放電(ESD)保護ダイオード アレイをベースとする、4 チャネルの過渡電圧サプレッサ(TVS)です。TPD4E001 は、IEC 61000-4-2 国際規格で規定されている最大レベル(レベル 4)の ESD 耐性を備えています。このデバイスにはチャネルごとに 1.5pF IO の容量があり、高速データ IO インターフェイスでの使用に理想的です。リーク電流が非常に低いため (最大値 1nA 未満)、血糖値計や心拍数モニタなどのアプリケーションでの高精度アナログ測定に適しています。

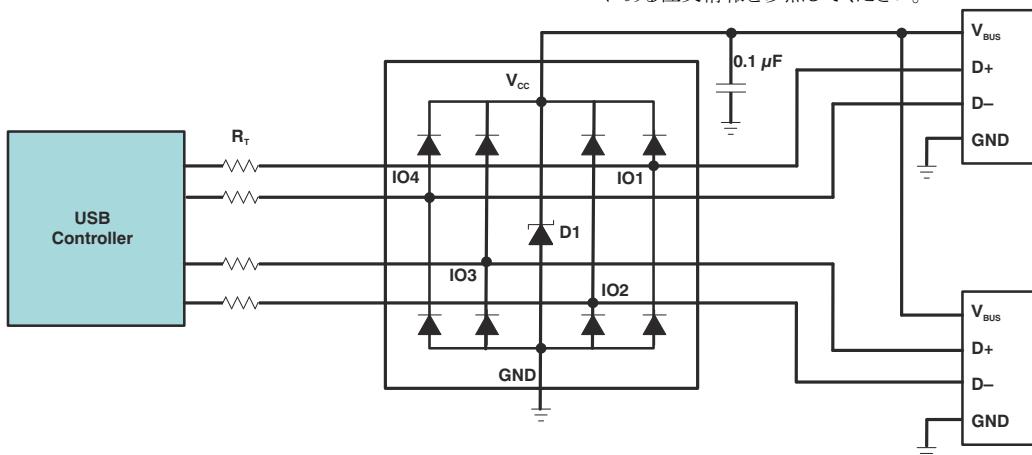

TPD4E001 は DRL (SOT)、DBV (SOT-23)、DCK (SC-70)、DRS (QFN)、DPK (PUSON) パッケージで供給され、-40°C ~ 85°C までの動作が規定されています。

PD4E1U06DCKR および **TPD4E1U06DBVR** も参照してください。これらは、**TPD4E001DCKR** および **TPD4E001DBVR** のピン互換品です。これらのデバイスは IEC 保護がより高く、容量が低く、クランピング電圧が低いため、入力コンデンサが必要ありません。

パッケージ情報

部品番号	パッケージ (1)	本体サイズ (公称)
TPD4E001	SOT (6)	1.60mm × 1.20mm
		2.90mm × 1.60mm
	SC70 (6)	2.00mm × 1.25mm
	USON (6)	1.60mm × 1.60mm
	SON (6)	3.00mm × 3.00mm

(1) 利用可能なすべてのパッケージについては、データシートの末尾にある注文情報を参照してください。

Pin Functions

NAME	PIN			I/O	DESCRIPTION
	DRS, DRL, DPK	DBV, DCK	TPD4E001R		
GND	3	2	5	—	Ground
IOx	1	1	1	I	ESD-protected channel
	2	3	3		
	4	4	4		
	5	6	6		
V _{CC}	6	5	2	I	Power-supply input. Bypass V _{CC} to GND with a 0.1- μ F ceramic capacitor
Exposed thermal pad (DRS package only)				—	Exposed thermal pad. Connect to GND or leave floating

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V_{CC}		-0.3	7	V
$V_{I/O}$	IO voltage tolerance	-0.3	$V_{CC} + 0.3$	V
$I_{(Surge)}$	IEC 61000-4-5 peak pulse current ($T_P = 8/20\mu s$), IOx pins		5.5	A
$P_{(Surge)}$	IEC 61000-4-5 peak pulse power ($T_P = 8/20\mu s$), IOx pins		100	W
T_J	Junction temperature		150	°C
Bump temperature (soldering)	Infrared (15s)		220	°C
	Vapor phase (60s)		215	
Lead temperature (soldering, 10s)			300	°C
T_{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

5.2 ESD Ratings—JEDEC Specification

			VALUE	UNIT
TPD4E001 in DRS, DRL, and DPK Packages				
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	All pins except 1, 2, 4, and 5	± 2000
			Pins 1, 2, 4, and 5	± 15000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	All pins	± 1000
TPD4E001 in DBV and DCK Packages				
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	All pins except 1, 3, 4, and 6	± 2000
			Pins 1, 3, 4, and 6	± 15000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	All pins	± 1000

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 ESD Ratings—IEC Specification

			VALUE	UNIT
TPD4E001 in DRS, DRL, and DPK Packages				
$V_{(ESD)}$	Electrostatic discharge	IEC 61000-4-2 contact discharge	All pins	± 8000
		IEC 61000-4-2 air-gap discharge	All pins	± 15000
TPD4E001 in DBV and DCK Packages				
$V_{(ESD)}$	Electrostatic discharge	IEC 61000-4-2 contact discharge	All pins	± 8000
		IEC 61000-4-2 air-gap discharge	All pins	± 15000

5.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
T_A	Operating free-air temperature	-40	85	°C
Operating voltage	V_{CC} pin	0.9	5.5	V
	IO1, IO2 pins	0	V_{CC}	

5.5 Thermal Information

THERMAL METRIC ⁽¹⁾	TPD4E001					UNIT
	DRL (SOT)	DBV (SOT)	DCK (SC70)	DPK (USON)	DRS (SON)	
	6 PINS	6 PINS	6 PINS	6 PINS	6 PINS	
R _{θJA} Junction-to-ambient thermal resistance	226.4	259.7	251.1	247.6	91.9	°C/W
R _{θJC(top)} Junction-to-case (top) thermal resistance	90.3	186.5	88.1	124.8	106.9	°C/W
R _{θJB} Junction-to-board thermal resistance	61.2	107.6	54.8	204.2	64.8	°C/W
Ψ _{JT} Junction-to-top characterization parameter	6.7	71.4	1.7	19.2	10.2	°C/W
Ψ _{JB} Junction-to-board characterization parameter	61	107.1	54.1	209.3	64.9	°C/W
R _{θJC(bot)} Junction-to-case (bottom) thermal resistance	N/A	N/A	N/A	N/A	29.9	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

5.6 Electrical Characteristics

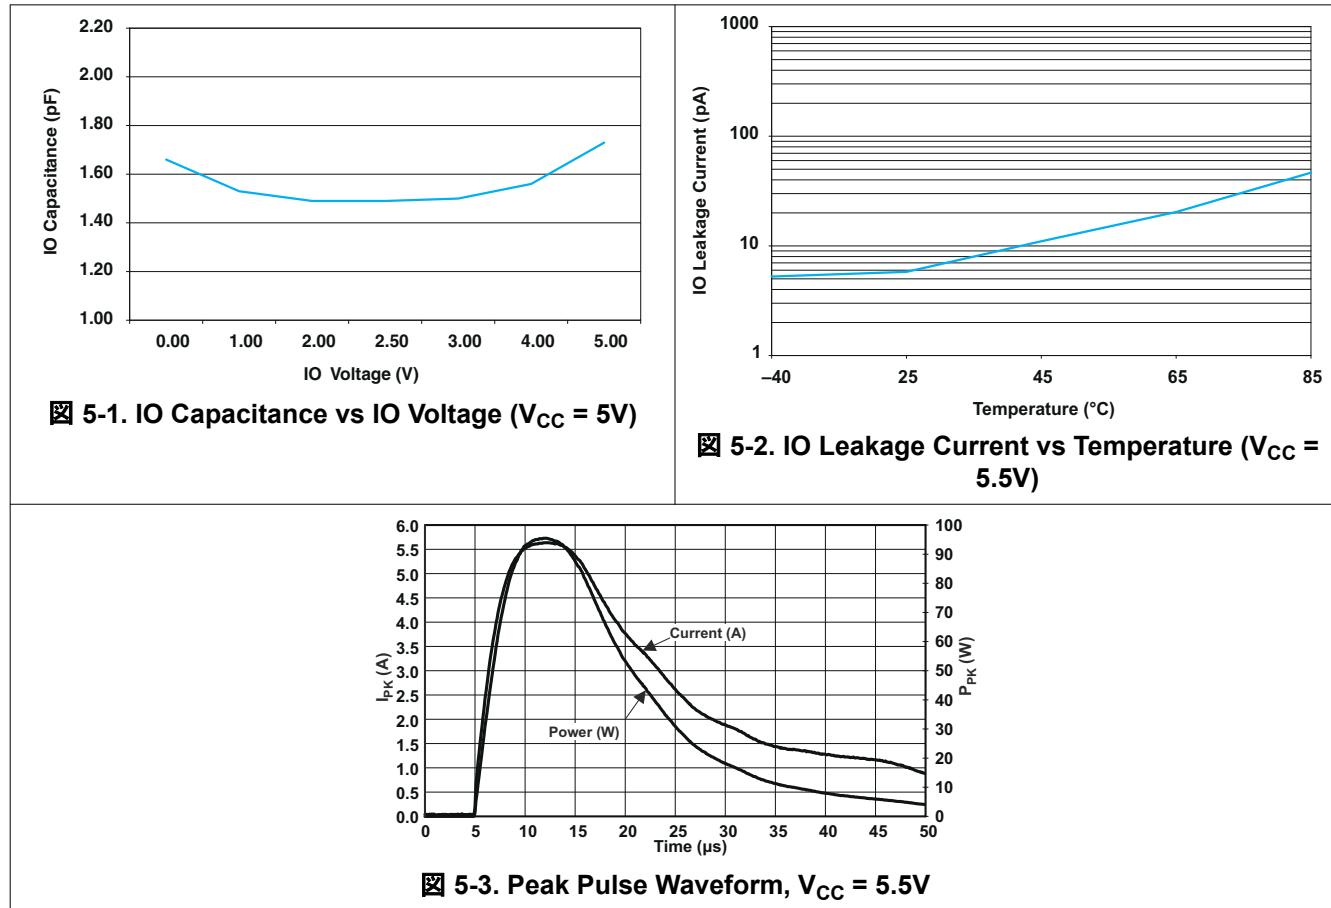

over operating free-air temperature range (unless otherwise noted), V_{CC} = 5 V ± 10%

PARAMETER	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V _{CC} Supply voltage		0.9	5.5		V
I _{CC} Supply current			1	100	nA
V _F Diode forward voltage	I _F = 10mA	0.65	0.95		V
V _{BR} Breakdown Voltage	I _{BR} = 10mA	11			V
V _C Channel clamp voltage	T _A = 25°C, ±15kV HBM, I _F = 10A	Positive transients	V _{CC} + 25		V
		Negative transients	-25		
	T _A = 25°C, ±8kV contact discharge (IEC 61000-4-2), I _F = 24A	Positive transients	V _{CC} + 60		
		Negative transients	-60		
	T _A = 25°C, ±15kV air-gap discharge (IEC 61000-4-2), I _F = 45A	Positive transients	V _{CC} + 100		
		Negative transients	-100		
	Surge strike on IO pin, GND pin grounded, I _{PP} = 5A, 8/20μs ⁽²⁾	Positive transients	17		
V _{RWM} Reverse stand-off voltage	IO pin to GND pin		5.5		V
I _{I/O} Channel leakage current	V _{I/O} = GND to V _{CC}		±1		nA
C _{I/O} Channel input capacitance	V _{CC} = 5V, bias of V _{CC} /2; f = 10MHz	1.5			pF

(1) Typical values are at V_{CC} = 5V and T_A = 25°C.

(2) Non-repetitive current pulse 8/20μs exponentially decaying waveform according to ICE61000-4-5.

5.7 Typical Characteristics

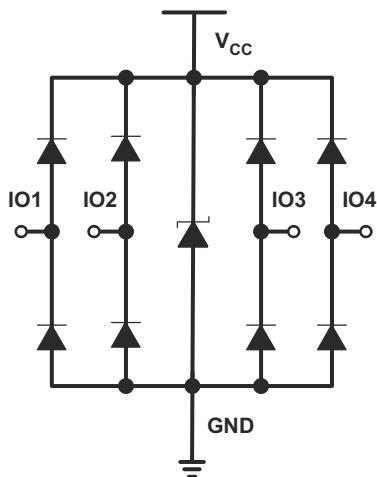

6 Detailed Description

6.1 Overview

The TPD4E001 is a four-channel transient voltage suppressor (TVS) based ESD protection diode array. The TPD4E001 is rated to dissipate ESD strikes at the maximum level specified in the IEC 61000-4-2 international standard (Level 4). This device has a 1.5pF IO capacitance per channel, making it ideal for use in high-speed data IO interfaces. The ultra-low leakage current (<1nA maximum) is suitable for precision analog measurements in applications like glucose meters and heart rate monitors.

6.2 Functional Block Diagram

6.3 Feature Description

The TPD4E001 is a uni-directional ESD protection device with low capacitance. The device is constructed with a central ESD clamp that features two hiding diodes per line to reduce the capacitive loading. This central ESD clamp is also connected to V_{CC} to provide protection for the V_{CC} line. Each IO line is rated to dissipate ESD strikes above the maximum level specified in the IEC 61000-4-2 level 4 international standard. The TPD4E001's low loading capacitance makes it ideal for protection high-speed signal terminals.

6.4 Device Functional Modes

The TPD4E001 is a passive-integrated circuit that activates whenever voltages above V_{BR} or below the lower diodes V_{forward} (-0.6V) are present upon the circuit being protected. During ESD events, voltages as high as ±15kV can be directed to ground and V_{CC} via the internal diode network. Once the voltages on the protected lines fall below the trigger voltage of the TPD4E001 (usually within 10s of nano-seconds) the device reverts back to a high-impedance state.

7 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

7.1 Application Information

The TPD4E001 is a diode array type Transient Voltage Suppressor (TVS) which is typically used to provide a path to ground for dissipating ESD events on hi-speed signal lines between a human interface connector and a system. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low R_{DYN} of the triggered TVS holds this voltage, V_{CLAMP} , to a tolerable level to the protected IC.

7.2 Typical Application

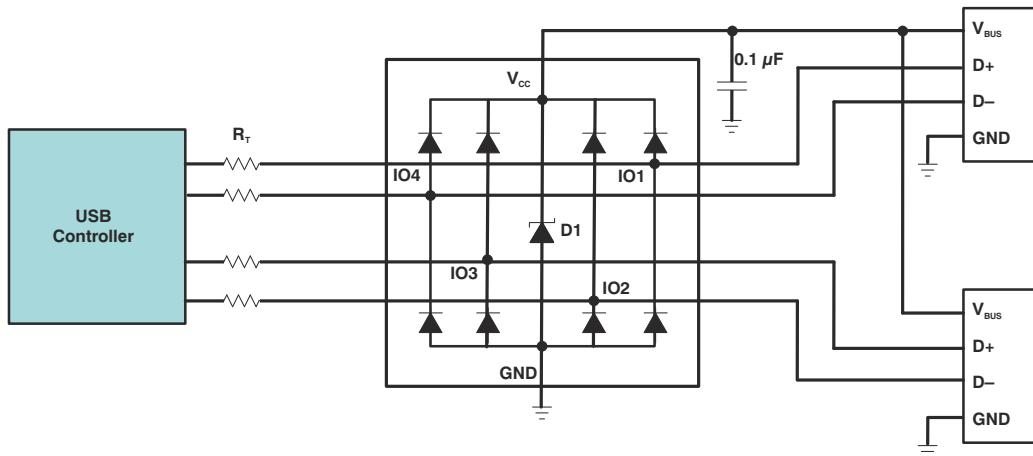

図 7-1. Typical Application Schematic

7.2.1 Design Requirements

For this design example, a single TPD4E001 is used to protect all the pins of two USB2.0 connectors.

Given the USB application, the following parameters in 表 7-1 are known.

表 7-1. Design Parameters

DESIGN PARAMETER	VALUE
Signal range on IO1, IO2, IO3, and IO4	0V to 3.6V
Signal voltage range on V_{CC}	0V to 5.25V
Operating Frequency	240MHz

7.2.2 Detailed Design Procedure

When placed near the USB connectors, the TPD4E001 ESD solution offers little or no signal distortion during normal operation due to low IO capacitance and ultra-low leakage current specifications. The TPD4E001 ensures that the core circuitry is protected and the system is functioning properly in the event of an ESD strike. For proper operation, the following layout/ design guidelines must be followed:

1. Place the TPD4E001 solution close to the connectors. This allows the TPD4E001 to take away the energy associated with ESD strike before it reaches the internal circuitry of the system board.

2. Place a $0.1\mu F$ capacitor very close to the V_{CC} pin. This limits any momentary voltage surge at the IO pin during the ESD strike event.
3. Ensure that there is enough metallization for the V_{CC} and GND loop. During normal operation, the TPD4E001 consumes nA leakage current. But during the ESD event, V_{CC} and GND may see 15A to 30A of current, depending on the ESD level. Sufficient current path enables safe discharge of all the energy associated with the ESD strike.
4. Leave the unused IO pins floating. In this example of protecting two USB ports, none of the IO pins are left unused.
5. The V_{CC} pin can be connected in two different ways:
 - a. If the V_{CC} pin is connected to the system power supply, the TPD4E001 works as a transient suppressor for any signal swing above $V_{CC} + V_F$. A $0.1\mu F$ capacitor on the device V_{CC} pin is recommended for ESD bypass.
 - b. If the V_{CC} pin is not connected to the system power supply, the TPD4E001 can tolerate higher signal swing in the range up to 10V. Please note that a $0.1\mu F$ capacitor is still recommended at the V_{CC} pin for ESD bypass.

7.2.3 Application Curve

图 7-2 is a capture of the voltage clamping waveform of TPD4E001DRL on IO3 during an 8kV Contact IEC61000-4-2 ESD strike.

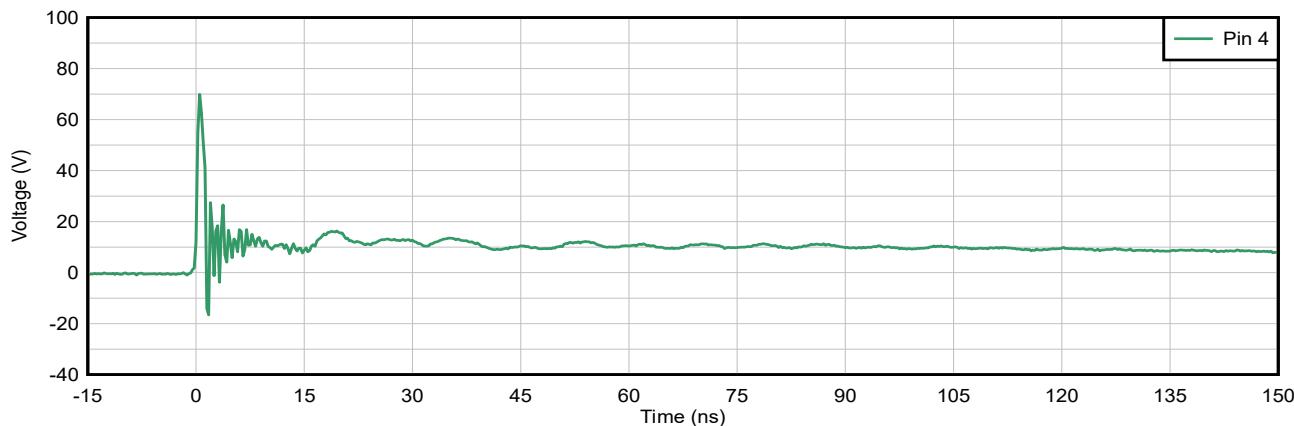

图 7-2. TPD4E001DRL IEC61000-4-2 Voltage Clamp Waveform 8kV Contact

Power Supply Recommendations

This device is a passive ESD protection device so there is no need to power it. Take care to make sure that the maximum voltage specifications for each pin are not violated.

8 Layout

8.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
 - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
 - The PCB designer needs to minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
 - Electric fields tend to build up on corners, increasing EMI coupling.

8.2 Layout Example

The following is a layout example for protecting two interface ports with the TPD4E001. One example is two USB 2.0 ports, as was discussed in the [セクション 7](#) section. For the USB 2.0 example, IO1 and IO2 is D+ and D-, respectively, of USB port 1. IO3 and IO4 is D- and D+, respectively, of USB port 2.

9.6 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことをお勧めします。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

9.7 用語集

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

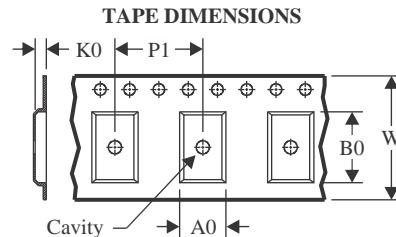

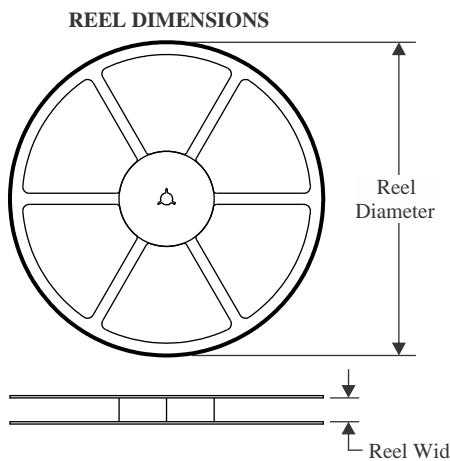

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - SON (Small Outline No-Lead) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.

THERMAL PAD MECHANICAL DATA

DRS (S-PWSON-N6)

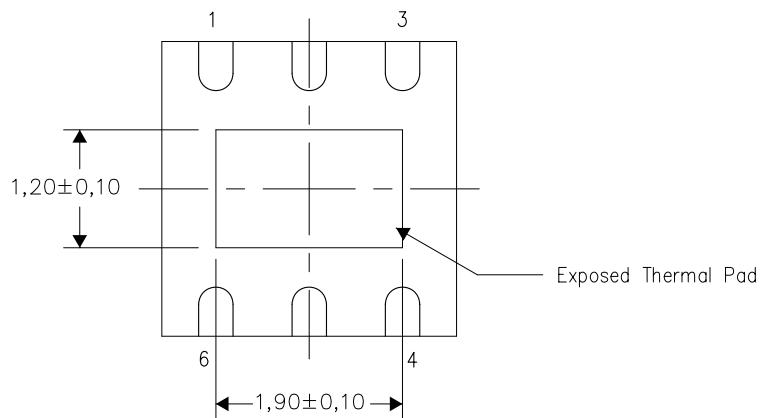

PLASTIC SMALL OUTLINE NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for solder mask tolerances.
