Business Roles

Program overview

When you join TI as an intern, new college graduate or experienced hire, you're joining a team of innovators that's been redefining what's possible for decades. Our innovations are at work all around you – in things you experience every day. We engineer and manufacture semiconductors that enable everything from connected cars to intelligent homes; from drones to smart phones. Our work is fascinating and challenging. But it's our people that make us great. TIers are problem solvers, achievers and collaborators. We are committed to our work, to each other, to our communities, and to shaping the future of electronics. And we're devoted to continuous learning and development.

We are currently hiring for positions in the following areas:

Information Technology

Partner with our development, manufacturing and business teams to collaborate and innovate system solutions to make it easy for TI to grow. Explore multiple areas in the world of IT as an application developer, business analyst, electronic commerce specialist, project leader, network engineer, solutions architect, or systems administrator. You'll be a valued member of the team and gain a vast understanding of business processes, how to develop quality solutions and enable business growth.

Finance

Experience developing, implementing and maintaining one or a combination of cost accounting, general accounting, financial planning, payroll generation, and tax accounting. This job allows you to be an expert from analysis of reports to national and local tax reports and returns.

Procurement and Logistics

Dive into challenging projects and discover worldwide procurement and logistics knowledge. Identify cost reductions using supplier managed inventory, second sourcing and reverse auctions. Work with suppliers and engineering groups to implement cost reductions.

Facilities

Experience various roles that support building and semiconductor facilities. We design, install, and operate different utility systems that include chemical, gas, electrical, water, cleanroom, HVAC, and controls, with a focus on safety and the environment. These infrastructure systems are designed to operate in compliance with International Standards and regulatory requirements, interruption-free in support of our 24/7/365 manufacturing operations where TI's world-changing technologies are created.

Human Resources

An HR position gives you the opportunity to explore the different facets of HR, focusing on recruiting, compensation, talent development or employee relations. As a strategic partner, HR plays a critical role in the company's success and you can help ensure TI has the talent and capabilities needed to win in the highly competitive and dynamic semiconductor market.

At TI, you belong

We cultivate a performance-based, inclusive culture where ideas are respected and encouraged and opportunity abounds.
