Analog Engineer's Circuit

AC Coupled Instrumentation Amplifier Circuit

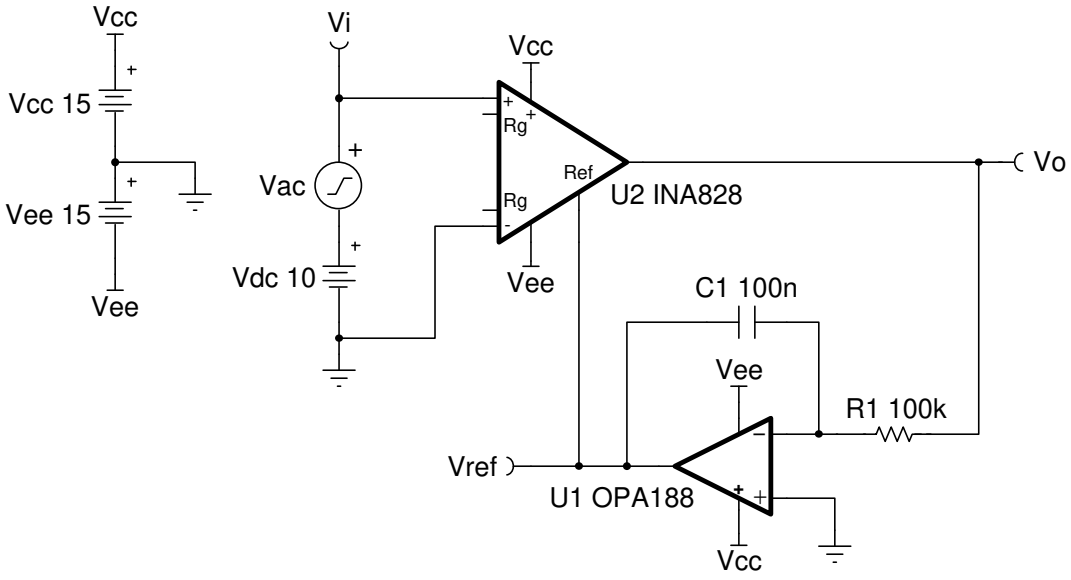
Design Goals

Input		Output		Supply	
V_{iMin}	V_{iMax}	V_{oMin}	V_{oMax}	V_{cc}	V_{ee}
–13 V	13 V	–14.85 V	14.85	15	–15

Lower Cutoff Frequency (f_L)	Gain	Input
16 Hz	1	±2VAC; +10VDC

Design Description

This circuit produces an AC-coupled output from a DC-coupled input to an instrumentation amplifier. The output is fed back through an integrator, and the output of the integrator is used to modulate the reference voltage of the amplifier. This creates a high-pass filter and effectively cancels the output offset. This circuit avoids the need for large capacitors and resistors on the input, which can significantly degrade CMRR due to component mismatch.



Design Notes

1. The DC correction from output to reference is unity-gain. U_1 can only correct for a signal within its input/output limitations, thus the magnitude of DC voltage that can be corrected for will degrade with increasing instrumentation amplifier gain. See the table in Design Steps for more information.
2. Large values of R_1 and C_1 will lower the cutoff frequency, but increase startup transient response time. Startup behavior can be observed in the Transient Simulation Results.
3. When AC-coupling this way, the total input voltage must remain within the common-mode input range of the instrumentation amplifier.

Design Steps

1. Set the lower cutoff frequency for circuit (integrator cutoff frequency). The upper cutoff frequency will be dictated by the gain and instrumentation amplifier bandwidth.

$$f_L = \frac{1}{2\pi \times R_1 \times C_1} = 16 \text{ Hz}$$

2. Choose a standard value for R_1 and C_1.

$$C_1 = 100 \text{ nF}$$

$$R_1 = \frac{1}{2\pi \times 100 \text{ nF} \times 16 \text{ Hz}} = 99.47 \text{ k}\Omega \approx 100 \text{ k}\Omega \quad (\text{standard} \quad \text{value})$$

3. The DC rejection capabilities of the circuit will degrade with gain. The following table provides a good estimate of the DC correction range for higher gains.

Gain	DC Correction Range
1 V/V	±10 V
10 V/V	±1 V
100 V/V	±0.1 V
1000 V/V	±0.01 V

Design Featured Instrumentation Amplifier

INA828	
V_{ss}	4.5 V to 36 V
V_{inCM}	V_{ee}+2 V to V_{cc}–2 V
V_{out}	V_{ee}+150 mV to V_{cc}–150 mV
V_{os}	20 µV
I_q	600 µA
I_b	150 pA
UGBW	2 MHz
SR	1.2 V/µs
#Channels	1
INA828	

Design Featured Op Amp

OPA188	
V_{ss}	8 V to 36 V
V_{inCM}	V_{ee} to V_{cc}–1.5 V
V_{out}	Rail-to-rail
V_{os}	6 µV
I_q	450 µA
I_b	±160 pA
UGBW	2 MHz
SR	0.8 V/µs
#Channels	1, 2, and 4
OPA188	

Design Alternate Op Amp

TLV171	
V_{ss}	2.7 V to 36 V
V_{inCM}	V_{ee}–0.1 V to V_{cc}–2 V
V_{out}	Rail-to-rail
V_{os}	750 µV
I_q	525 µA
I_b	±10 pA
UGBW	3 MHz
SR	1.5 V/µs
#Channels	1, 2, and 4
TLV171
